Datapath Company Profile

Datapath has come a long way since its formation in 1982 when it set out developing low-cost colour graphics terminals for mini computers. Today, the company is a leader in control technologies for creative multi-display video walls, small- to medium-scale video walls in enterprise collaboration environments, and command and control room video walls of any scale. Datapath remains an expert in capture and graphics technology, offering a comprehensive range of capture cards to suit a variety of video modes and complementary graphics cards for multi-screen solutions. These factors make Datapath a specialist in handling media from any source.

The company's products are distributed across five continents to customers in more than 100 countries, covering industries such as professional audio and video, retail, military, education, security and healthcare, to list but a few.

A privately-held business, Datapath has its headquarters in Derby, UK, along with sales and support offices in the USA, France, Japan and China. The company maxim 'Excellence by Design' underpins its philosophy and reputation, attracting many blue-chip companies and institutions to leverage Datapath's expertise to solve their display challenges. Listening carefully to customers, implementing a policy of continuous improvement and putting quality first are further factors that have helped the company engineer the world's best visual solutions.

Datapath cares about the performance of its products, which after all shapes market reputation and generates repeat business. Being a technology provider carries certain responsibilities that the company takes extremely seriously. These include being the source of new ideas, establishing quality standards and being recognised as a reliable supplier.

Today, Datapath is expert in video wall control applications. The company can offer high-end, complex, complete video wall solutions to help simplify projects for its customers. A number of wall controller ranges with complementary software are available, which can be summarised into three principal categories: creative solutions; collaboration; and reliable command and control.

Creative solutions comprise the company's multi-display technologies, which today include the best-selling x4 and new-generation Fx4 display wall controllers for applications within digital signage, live events and broadcasts. These controllers allow users to easily manage multiple video inputs and outputs. Support comes from Datapath's Wall Designer software, which allows users to unleash their creative side.

Effective collaboration solutions are offered through the company's recently-unveiled iolite range of discreet controllers for small- to medium-scale video walls. Compact in size, but epic in performance, the self-contained iolite fits perfectly into retail, corporate reception and boardroom environments. WallControl 10 software is also offered so that customers can quickly and effectively manage content that includes video captures, IP streams and local applications.

Last but not least, reliable command and control applications can be executed with Datapath's proven and established VSN range of versatile wall controllers. These have been designed for video wall and multi-screen display installations that require a balanced number of HD video captures and HD video outputs. VSN controllers also leverage the capabilities of WallControl 10 software.
