I . Smart IR HD&IP Camera

WHY CHOOSE LONGSE SMART IR?

There's always an intelligent way to make cameras smarter – Smart IR, a technology to adaptively sense the change made by environment, right goes into the camera of Longse, to defeat the light problems.

- Optimize picture through adjusting sensitivity, to conquer light problems perfectly.
- Light Board Technique helps sense the environment change intelligently.
- Overexposed Image Processing can return the picture to the crystal clear one.
- Adaptive Ability inside it can adjust the brightness and contrast.

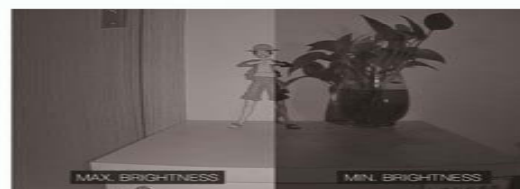

Adjustment to Optimize the Picture

The technological change brought by Smart IR has sublimated the quality of Longse-made IP Cameras. Thus, it can solve the problems related to light through adjusting, even if the camera was under the night.

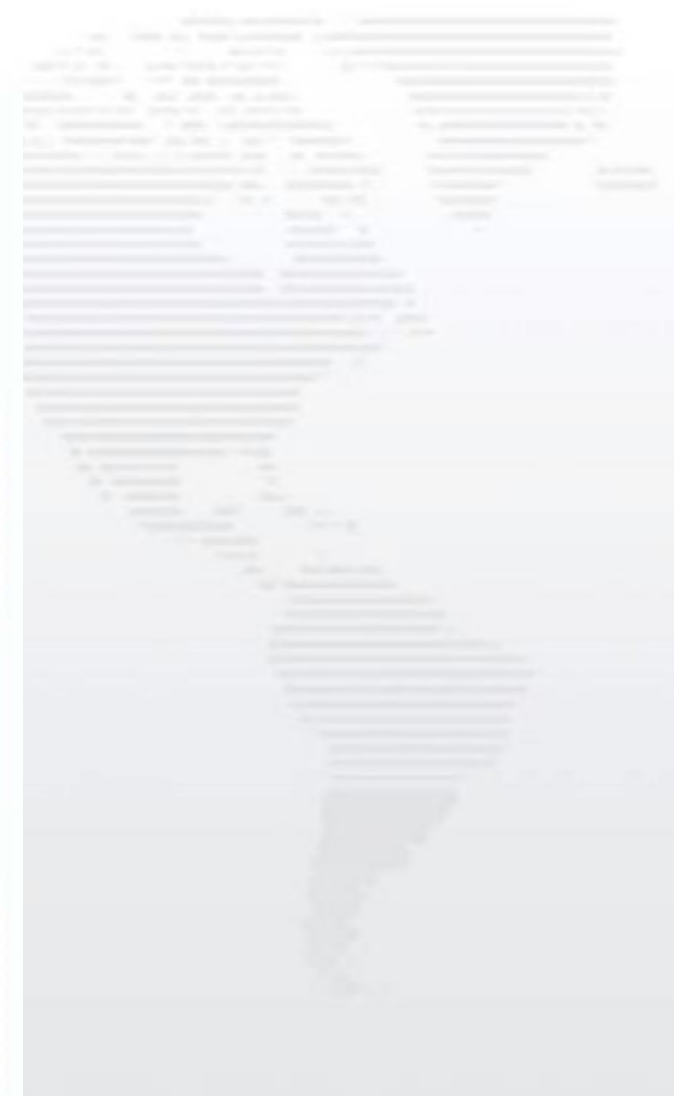

Intelligent Experience to Amaze You

The technique of light board, is able to sense the environmental change by adjusting the IR lights, and makes the night vision experience better. Meanwhile, its image processing technology will deal with overexposed image, amazing you by its crystal clear picture.

Intuitive Imaging Effect to not Miss Out Any Details

Under the overexposed imaging, Smart IR can thoroughly take care of it by its adaptive ability, optimizing brightness and contrast, making the details of the picture smooth, and bringing you incredible experience.

Longse

PIR Thermal Induction Alarm Camera

- A high reliable dual integrated pyroelectric sensor is used.
- Single-Chip digital signal processing, excellent anti-interference ability.
- High sensitivity and reliability.
- Operating temperature: -10°C to 60°C

Smoke Alarm Camera

- Gas Sensor: wide range of detection with quick response.
- Nice sensitivity to smoke in the range of comparative concentrations.
- Long service life, simple drive circuit with low cost.

Siren Alarm Camera

- When the PIR camera and smoke camera trigger alarm signals, the siren alarm responds immediately.
- The siren alarm is synchronized with the DVR, once triggered, the alarm area can be monitored in full screen in real time.
