Create Value

PRYSM

AppVision™ editor

Prysm Software is a French medium-sized company based in Aix en Provence that develops and markets a PSIM software: AppVision™. Active in the market for over 25 years, Prysm Software relies on its network of distributor and integrator partners to deploy and maintain projects with the AppVision™ platform.

Philosophy

NEUTRAL

We are independent from the systems we integrate. This gives our partners and end clients the freedom to choose the best equipment and applications for their installation.

OPEN

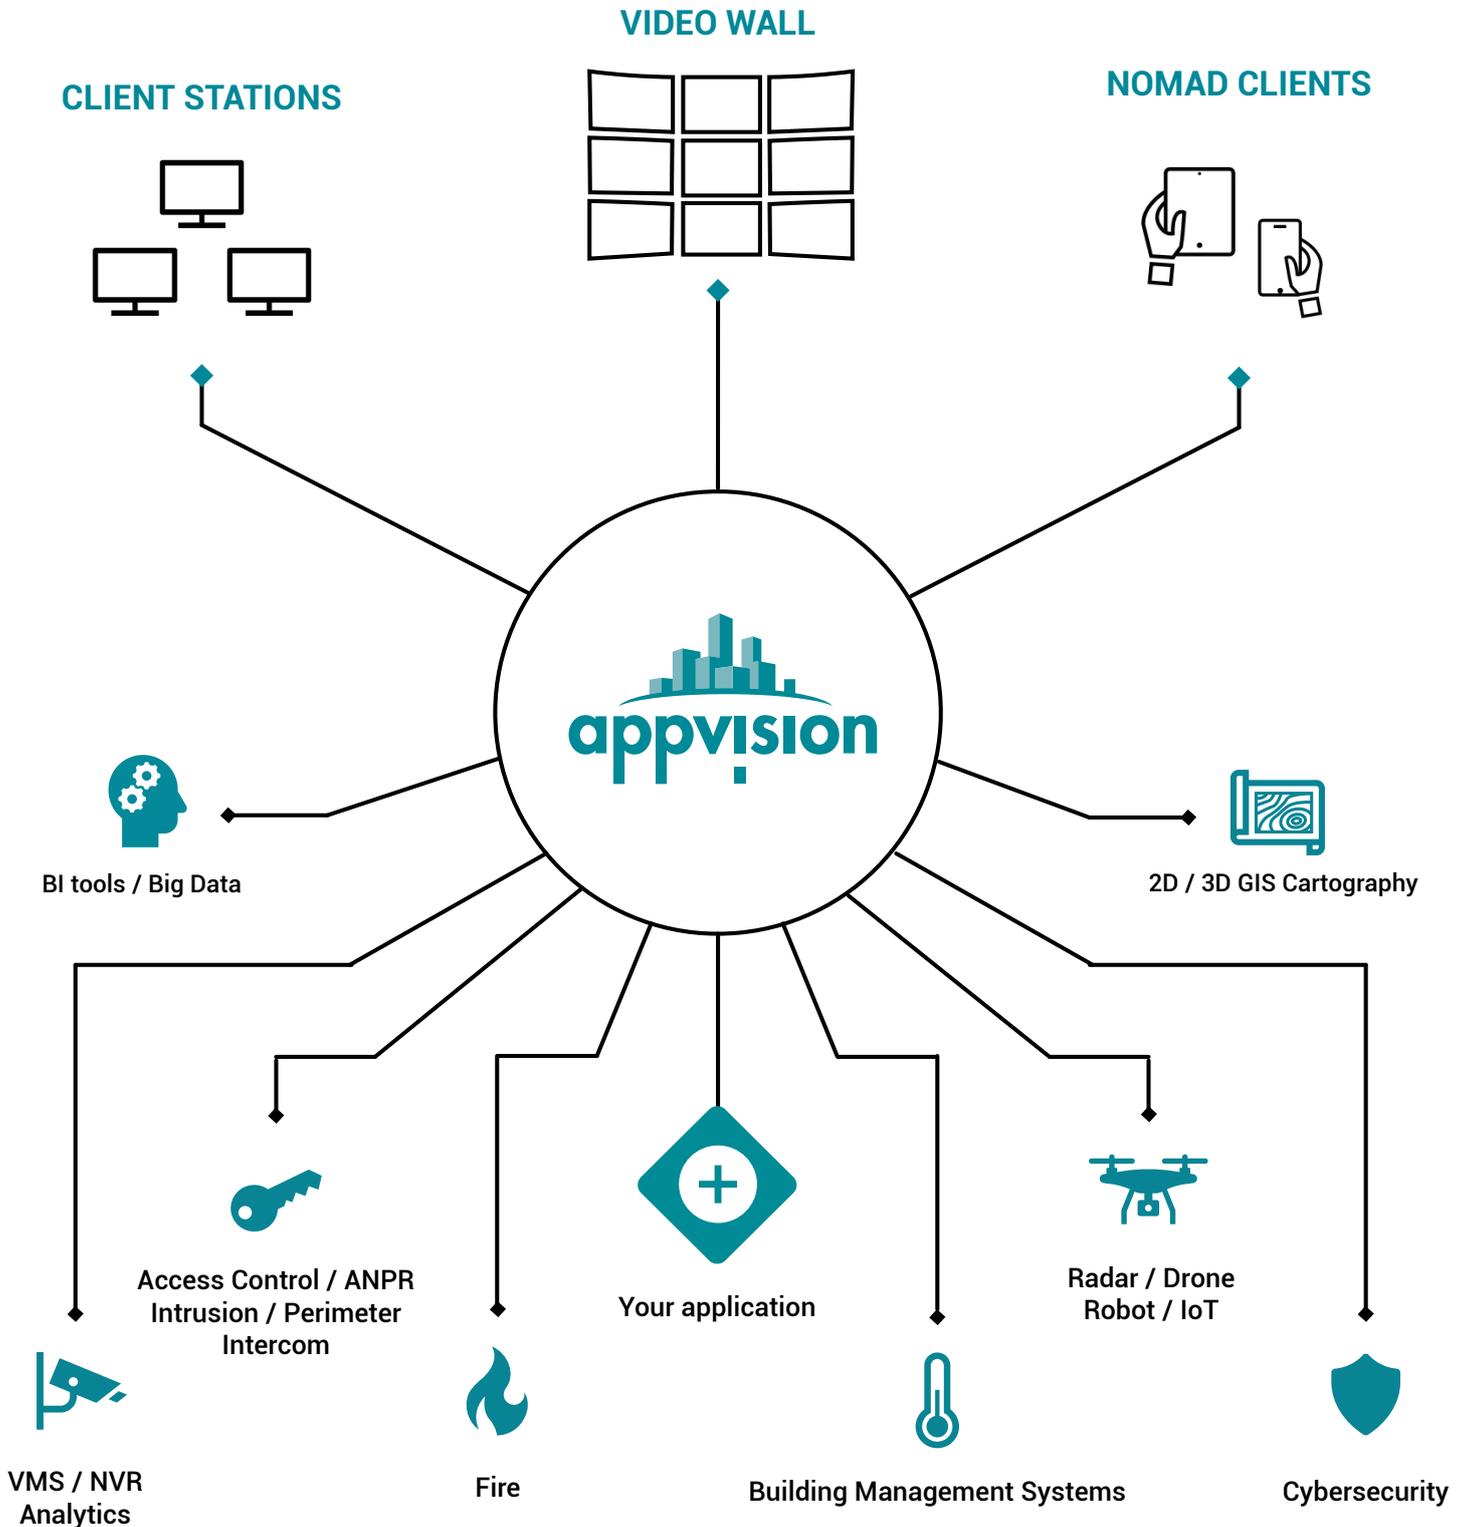

AppVision™ is 100% customizable: graphical interface, features and extensions. Our partners perform these customizations in total autonomy. They can create their OEM version to ensure that the platform meets their market and their customers' needs as closely as possible.

CONVERGENT

We focus on the integration and interaction capability of AppVision™. Any system or application with a communication protocol can be connected to AppVision™ to interact with other systems.

ARCHITECTURE

AppVision™ is an open solution. Therefore, it allows to federate and monitor in a single interface systems and applications that do not natively communicate with each other. AppVision™ is mainly used in the security world. It is increasingly deployed for technical monitoring such as SCADA and IoT networks.

MAIN FEATURES

GRAPHIC INTERFACE

Ergonomic to configure the platform and create working environments adapted to the operators needs...

ALARM MANAGEMENT

Intuitive and efficient: the operator is guided by instructions or procedures via workflows or scenarios.

LINKS ENGINE

To create interactions on events or alarms between equipment of different types and brands.

PREVENTIVE MAINTENANCE

AppMaintenance™ centralizes the maintenance management of connected systems: periodic schedules, error reports, notifications...

SYNOPTICS

Creation of plans thanks to the many graphic formats and GIS cartography supported.

AUDIO MANAGEMENT

Our SIP client allows the management of a large number of intercoms and audio systems on the market.

VIDEO MODULE

AppVideo™ is used to federate and control multiple video systems and applications: VMS, NVR, DVR, Analytics.

OPTIONS

To customize your project, we offer a range of options: user message, email / SMS notification, SNMP, visitor management ...

ACCESS CONTROL

In addition to the control - command mode, AppControl™ integrates access control systems from different brands into a single interface to simplify overall access control management.

ARCHITECTURES

Our range of architecture allows you to choose the one that will best suit your project :

- Single-server
- Back-up
- Federation
- Load Balancing
- Multi-server client.

OUR PARTNERS

INTEGRATORS

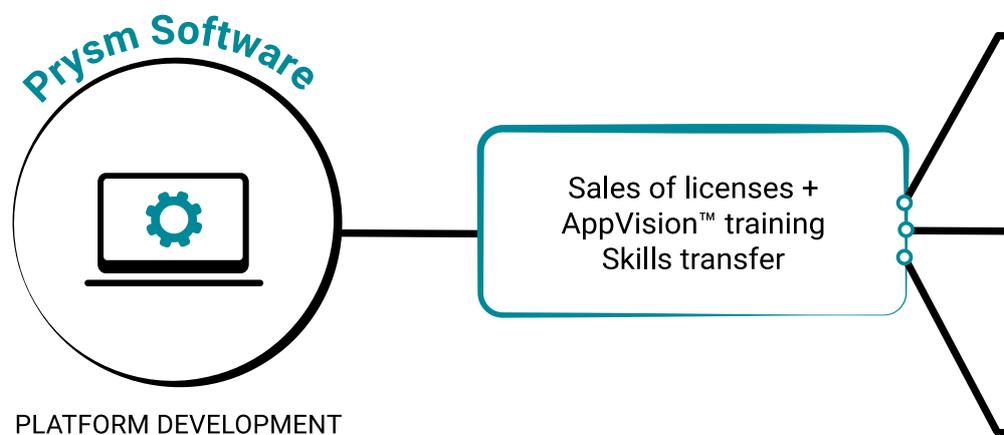

They deliver the projects to the end client, either in autonomy or with the support of a distributor.

DISTRIBUTORS

In charge of providing support to their integrator customers and passing on knowledge of AppVision™.

BUSINESS MODEL

Our business model is defined by a golden rule: we never sell directly to the final client. It is our partners who implement and maintain projects thanks to the skills and knowledge acquired during our training courses.

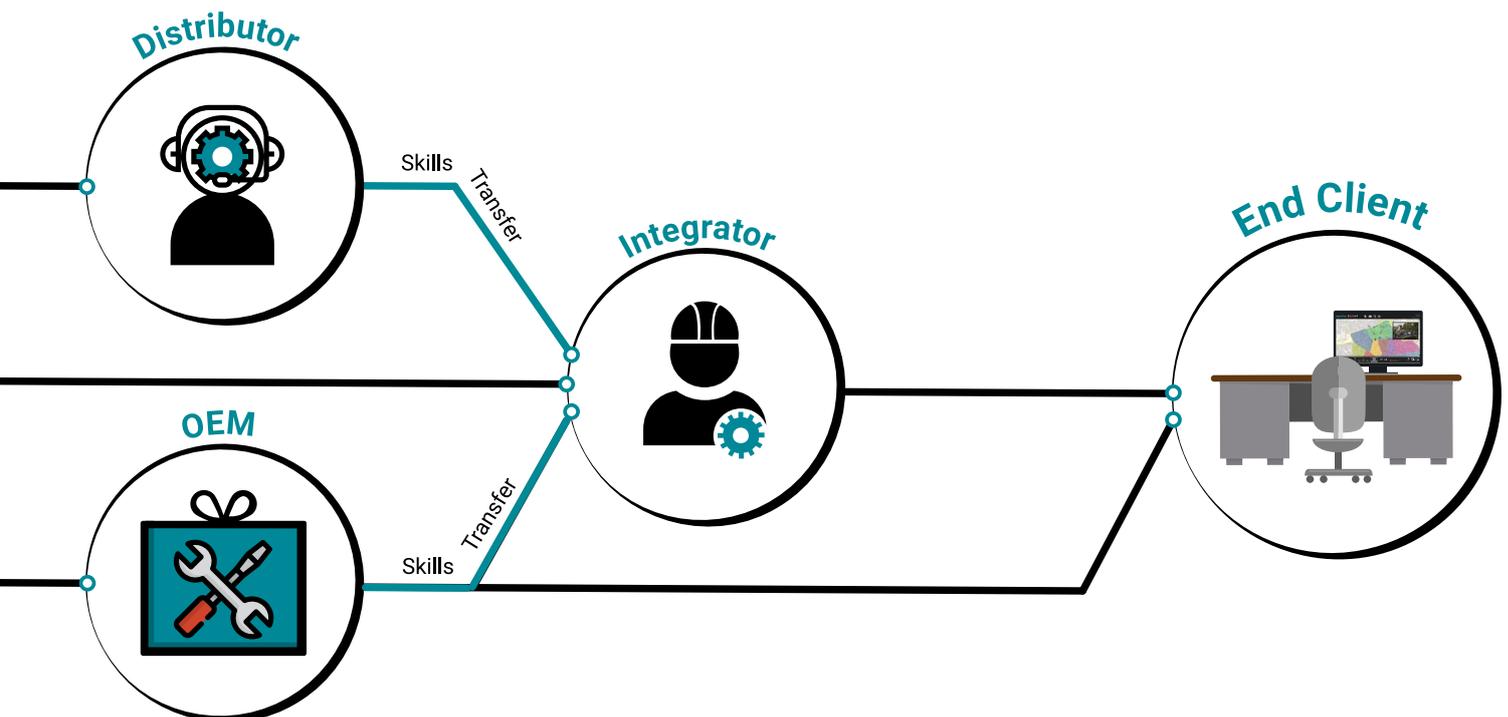

OEM

Integrators or manufacturers, OEMs sell their customized solution.

TECHNOLOGY PARTNERS

Equipment manufacturers and application vendors who share their communication protocols for Prysm and its partners to integrate their products into AppVision™.

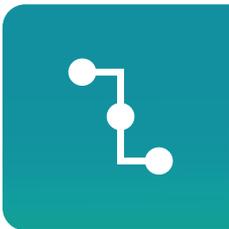

Benefits

Why deploy AppVision™

FREEDOM OF CHOICE

With its library of existing drivers and integration capabilities, AppVision™ gives you the ability to choose the brands and products best suited to your installation.

INTERACTIONS BETWEEN EQUIPMENTS

Thanks to its links engine, AppVision™ can easily create interactions between different connected systems. Operator reactivity is optimized, the level of security increased.

A STREAMLINED WORKSTATION

A desktop without integration means: many different software installed on multiple PCs. With AppVision™, you streamline your desktop with one interface and one DB to monitor everything.

THE EVOLUTION OF YOUR INSTALLATION

With AppVision™, you federate the technologies already existing in your facility and those implemented in the future without impacting the overall architecture. Your installation can evolve seamlessly.

A COST-EFFECTIVE INSTALLATION

When you deploy AppVision™ on your installation, you generate ROI. You realize immediate savings on your operations and in the longer term. The cost of upgrading your installation is thus under control.

Our difference

Why choose AppVision™ as your PSIM

OUR INTEGRATION CAPACITY

With our SDK, products with a communication protocol can be integrated into AppVision™. We also perform a skills transfer for you to perform your own integrations.

UNLIMITED CUSTOMIZATION

You can customize our platform to create your own OEM version and meet your markets' expectations even better, while respecting your clients' requirements.

EMPOWERING OUR PARTNERS

Thanks to the transfer of skills performed by our trainers, our partners can deploy, customize and develop the solution independently.

OUR ACCESS CONTROL MODULE

AppControl™ is a full-featured, multi-brand, multi-site, multi-user access control management software, independent of hardware manufacturers.

OUR BUSINESS MODEL

We sell licenses exclusively. We do not implement the projects. We develop AppVision™ and support it. We never compete with our integrators and distributors.

VERTICAL MARKETS

AppVision™ is scalable to any type of project regardless of size or complexity. Our platform is customizable to fit the needs of each market.

SMART CITY

SMART BUILDING

AppVision™ Community

OUR PARTNERS, ACTORS OF THE COMMUNITY

AppVision™ Community offers you the opportunity to **interact** with partners more seamlessly.

WHEN YOU JOIN THE COMMUNITY:

- ◆ You get the latest information: driver updates, major and minor releases of AppVision™...
- ◆ You can show your achievements to other community partners.
- ◆ You have the possibility to create your own events within the community around AppVision™ or attend private webinars organized by Prysm.
- ◆ And most importantly: you have access to an extensive directory of people who use and configure AppVision™. So you can always find help and support from other members.
