

SIEZA®

Professional Perimeter Intrusion Detection System

- + Accurate identification of the place of an intrusion
- + Very low false alarm rate thanks to the application of differential logics
- + IP based solution
- + Safeguarded detection line – redundant system
- + Unlimited perimeter length
- + Long life cycle – smart and simple construction, no moving components
- + Independent set up of each detector

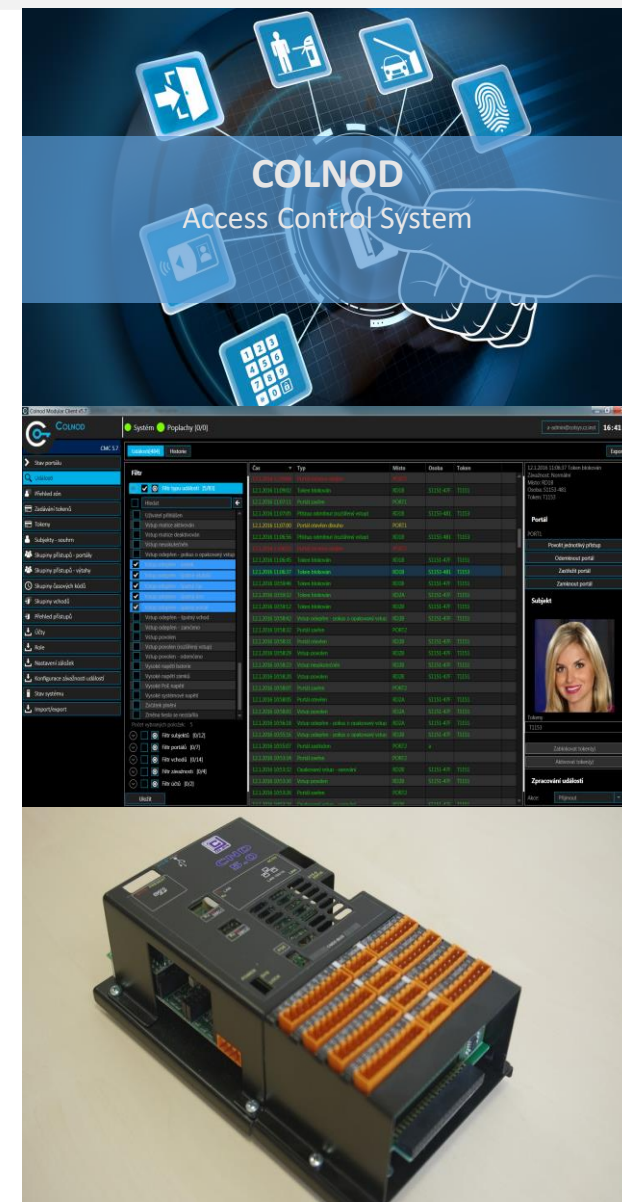

Integrated Security System

- + Effective supervision, control and administration of security applications
- + User permission management
- + Distributed client – server architecture
- + Redundancy for servers and connections
- + Control of technologies
- + Smooth vector graphics with imports
- + On-line and off-line operation

Access Control System

- + Large number of access points
- + Multiple authorization support
- + Interoperability with both intruder and fire alarm systems
- + System security and protection
- + On-line and off-line operation
- + Optional customer modifications

Human Presence Detector

- + Designed to detect persons hidden in vehicles
- + Easy use and high detection efficiency
- + Minimum space requirements
- + Outdoor design of sensors
- + Export of measurement results
- + Stationary, mobile and portable version

Public Warning and Notification System

- + **Complex warning, alert and information system**
- + Warning the population in the case of emergency situations
- + Informs emergency services
- + Connects with the national warning and information system
- + Communication over land, mobile and other radio networks
- + User friendly navigation with graphics based interface

Thank you for your attention
