

Security Installations

PRODUCT OVERVIEW

With SITEC you are on the „safe“ side...

In security areas like for example

- deliveries of cash and during cash transactions at banks
- entrances to embassies, prisons, police stations, official authorities and industrial enterprises
- military facilities
- data centres

personal contact between „inside“ and „outside“ is not desired in most cases.

The security of persons, valuables, money and data has absolute priority.

Secure, tested systems are essential to enable the transfer of money, material or documents without endangering clerks and employees at any time.

1

Bullet-Resistant Counter Element with pass-through

2

The Intercom System DELTA was specially developed for glazed counter elements where good communication between in- and outside is necessary. DELTA combines modern technology and excellent design.

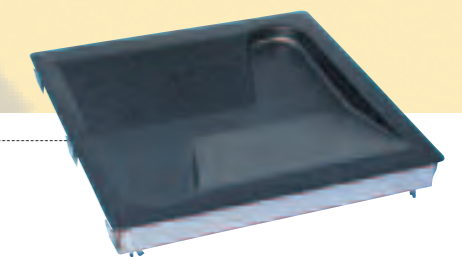

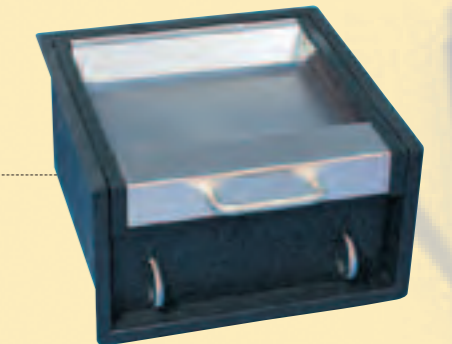

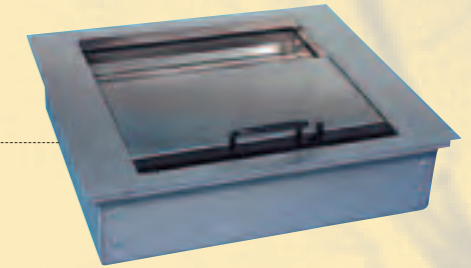

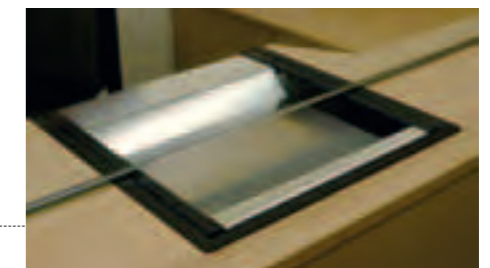

3

Secure electronic lockers for the distribution of urgent deliveries of goods, mail or medicine: Single doors at the collection side, overall opening at the distribution side. An integrated counter element with intercom system allows a personal advice, even outside opening hours.

4

Transfer Trays and Pass-Throughs in various sizes, executions and bullet-resistant classifications.

Controlled Access

1

Anti-tailgating Biometric Lock

The Personnel Access Lock **AXXES** with weight control system ensures that only an authorised person is allowed to enter the security area.

2

5

Entrance systems, Pass-Throughs, Metal Detectors, Door Drives, Access Controls

Money Transfer Systems
Personnel Access and Material Locks in bullet-proof and burglar-resistant execution

3

4

Security Made-To-Measure

Bullet-, burglar- and fire-resistant doors and partition walls in combination with Personnel Access or Material Locks

We build complete systems according to your ideas.

Made-to-measure. For sure.

6

Porters' Lodges
up to highest security classifications:
Bullet-resistant
Burglar-resistant
Fire-resistant

Service with Security!

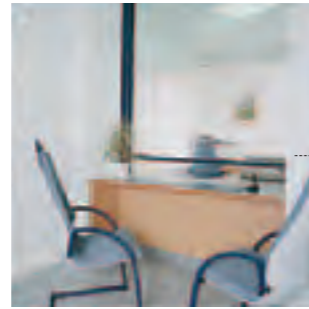

Banks, petrol stations, casinos, jewellers' shops and official authorities are always exposed to the risk of attacks and robberies.

While planning new buildings or modifications, high value is placed on customer-friendliness and personal contact. Of course the attractive design of the furnishings plays an important role, too.

Security Screens invisibly integrated into the counter combine customer-friendliness and design with employees' demands for a high degree of security.

Bullet-proof screens which rise from the counter in a fraction of a second protect employees against dangerous attacks.

Our Security Screen P 3300 with rising bullet-proof glazing represents „*Security à la Carte*”

1

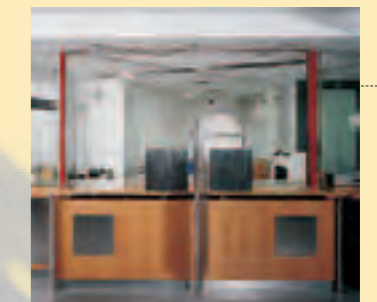

Seated Counter P 3001
with fast-rising steel plates

2

Security - fast
Only 0.4 seconds to security

With the screen closed, the customer side can be used as a self-service area.

3

- **For normal use:**
Customer-friendly service at an open counter. The attack protection is invisibly hidden in the counter.
- **In case of an attack:**
The clerk releases the Security Screen. Within a fraction of a second the bullet-proof glazing closes the area above the counter. The employee is protected.
- **High risk or during operation at night:**
The security glazing is closed as a precaution. The customers are served via the integrated pass-through. The personnel is protected against attacks.

4

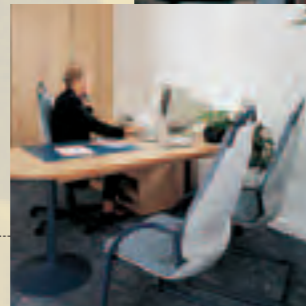

Security Screen invisibly hidden inside the counter

Ready for immediate use

1
Completely equipped branch during loading – also for lease.

3 Turn-key banks in module style. Complete with installation, furniture, alarm systems, safe,
