

Security for buildings.

TELENOT – Manufacturer and system provider.

Designing a secure and smart future.

The requirements for reliable and modern security technology are higher than ever for all buildings.

In every

- Commercial and industrial building
- Public sector building
- Retail building or
- Private building

security plays a **key role**.

The issue of security with all its specific requirements and **strict quality** standards for the protection of

- People
- Property
- Stored goods and products
- Production systems
- Intellectual property and
- Physical building structures

in conjunction with other trades is

paramount. The **coordinated access control** and **management** of people in buildings alone is the **key factor** for correct functioning and workflows in buildings in industrial, commercial, and the public sectors.

Networking and the interaction of sensors from security technology with other systems can also have a **significant impact** on **energy efficiency**. Security and energy management are the **megatrends of the future** in the area of smart buildings. The aim is to perfectly coordinate the **security aspects** with those for **energy efficiency** and **comfort** and to combine them safely and effectively!

With its certified and standard-compliant security solutions, TELENOT offers you the **perfect solution for every application**. With TELENOT, you know you get **maximum reliability, sustainability, system interoperability, and innovation**.

INTRUDER ALARM TECHNOLOGY

FIRE DETECTION TECHNOLOGY

ACCESS CONTROL

INTELLIGENT CONTROL

Approvals

Association of security companies in Austria

SES Swiss Association of Installers of Security Systems

TELENOT has got you covered. System expertise for all building types.

As a leading manufacturer of electronic security technology for the areas of...

- Intruder alarm technology
- Smart alarm systems
- Fire detector and
- Access control technology and
- Integration of approved security and
- hazard alarm solutions in smart-building and
- Smart-home systems

TELENOT is by your side.

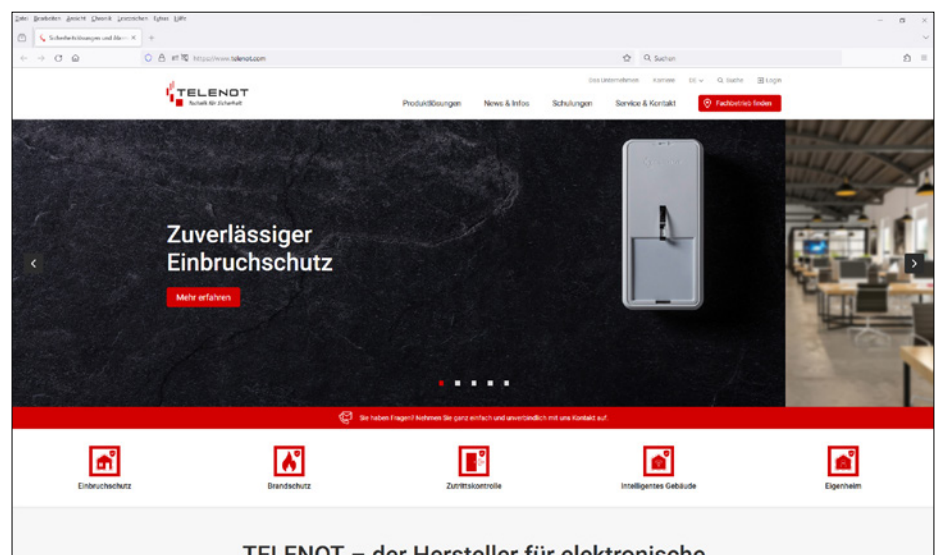

An unparalleled range of peripheral devices with more than **2,000 security products** from **detectors, sensors, and installation materials** through to special solutions such as **smoke aspiration systems** guarantees security solutions for every building type in every industry.

We support you through all phases of your projects.
From

- Preliminary planning
- Tendering
- Project planning
- Inspection
- Mounting
- Commissioning all the way to
- Service and maintenance intervals.

We have the **largest network of certified specialist installers** for guaranteed security. Together with our authorized TELENOT partners, we stand for a **fair and optimum price/performance ratio**.

Your satisfaction and your trust are our motivation!

TELENOT inspires. Customized planning service.

For **commercial and industrial construction projects**, there are numerous **insurance regulations, building regulations, or fire safety regulations** that must be observed and complied with.

Whether you are a **planner, developer, architect, general contractor**, or a **construction department** at a major company: TELENOT planning service supports you from the very start of your project. For your requirements and property, we create a **security concept** that complies with all electronic security technology directives in the areas of **intrusion protection, fire safety, and access control technology**.

You receive comprehensive **design planning documentation** with a legend, parts lists, tender specifications, and a cost estimate.

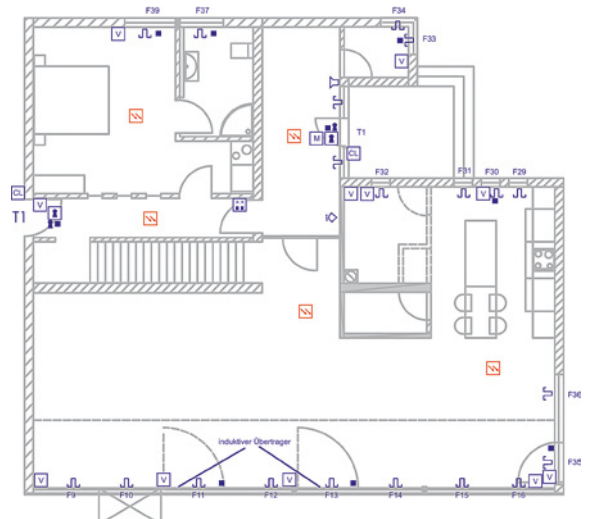

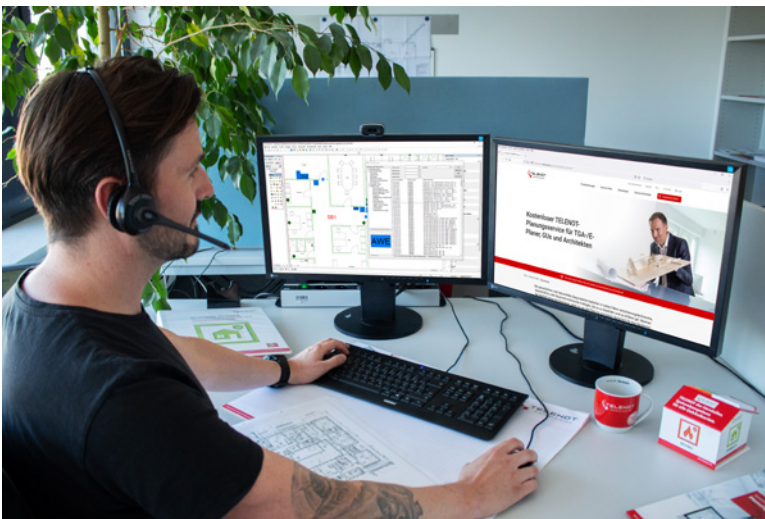

Simply send us your questions, requirements and information about the property as well as your floor plans in dwg, dxf or pdf format to our planning department:

- planungsservice@telenot.de
- planungsservice@telenot.at
- planungsservice@telenot.ch

We will then contact you to clarify and coordinate all open issues.

A network like no other – Authorized TELENOT partners. Approved expert guarantee.

In Germany, Austria, Switzerland, Luxembourg, Italy, Croatia, Hungary, Poland, Spain, Portugal, and other European Countries, TELENOT offers the **largest and best network for guaranteed security with more than 500 authorized TELENOT partners.**

They represent a network of officially certified specialist installers that you can rely on for **planning, mounting, and commissioning** as well as **24-hour servicing**. The authorized TELENOT partners deliver outstanding **security solutions** and **top service** for **commercial buildings, small and medium-sized enterprises, industry, retail, the public sector, and owners of private houses and apartments.**

Our true commitment to our customers is reflected in our daily work – **services and expertise for certified security:**

We support you right from the start of your construction project with the **planning and project management** of your security requirements for intruder alarm technology, fire detection technology, access control

technology, video technology, and their integration into building management systems.

- Providing your customers and clients with informative information documents
- With the right product selection according to your individual security requirements
- In evaluating your construction projects
- With planning and project development services in line with directives to avoid any surprises with your property insurer, planning office, or responsible fire department
- In the provision of VdS/VSÖ/SES preliminary certificates for your property insurer
- With mounting, commissioning, and maintenance through to 24-hour service and arranging approved emergency call centers

This gives you guaranteed security, from the individual products **'MADE BY TELENOT'** to the **approved systems** through to planning, mounting, commissioning, and service.

Numerous chain stores, associations, and organizations work together with TELENOT and rely on our security solutions. Member companies have the option of having their property inspected for security gaps free of charge.

**Authorized
Partner**

TELENOT key account. Real added value.

Companies and industries are increasingly demanding **uniform security standards** and want to implement these requirements regarding **building security** and **hazard alarm technology** as part of a technically **correct** and **coherent concept**. TELENOT designs and realizes comprehensive security concepts that are tailored to the particular requirements.

The TELENOT security manual can include the following security-relevant subsections:

- Intruder alarm system
- Fire detection and fire alarm system
- Access control systems
- Video system
- Securing emergency exits, escape doors, hold-up, and amok alarms
- Shop-in-shop concepts
- Special solutions, for example,
 - Monitoring of refrigeration rooms
 - High-speed doors
 - Technical migrations
 - Alarm sequence regulations
 - Late and night delivery solutions for retail customers
- Integration in building management solutions

Creation and implementation

In a first step, we work out the protection goals, taking all **standards** and **directives** as well as all **customer requirements** into account. Next, the **necessary sectors** (intruder alarm, fire detection, video surveillance, access control) for the respective **security scope** of the different premises (retail stores / logistics centers / administrative offices / production buildings / warehouses, etc.) are defined. All **security concepts** are **individually matched** to the customer's requirements. They are then created and can be adapted at any time to changing circumstances.

Planning and project development in line with directives as well as detailed and illustrated representations of installation plans, and operating and functional sequences are also included in the **security manual**.

The **security manual** is created by the **TELENOT key account team** in close consultation with the contract partner. Once it has been **approved by the customer**, the manual is then implemented and introduced.

The **uniform specification and definition** of the comprehensive building security concepts saves **enormous amounts of time and money**, especially for chain stores, discount supermarkets, and companies operating across multiple locations, and results in optimized processes and a **uniform security concept** across borders.

TELENOT supports you.

Extensive training courses in all security fields.

TELENOT supports your daily work with a **comprehensive training program**. We offer a wide range of **basic, product, and system courses**.

The basic courses for **intruder detection technology, fire detection technology, and access control** have proven their value over many years. They enable new technical employees as well as new sales staff members of specialist installer firms to familiarize themselves with the **necessary basic concepts and technologies**.

The various product courses focus on the details of the parameterization and mounting of TELENOT products. In our courses we pay a **particular attention to parameterization exercises** that will enable you to apply the **knowledge acquired directly in practice**.

In addition, we offer a **combined workshop** for intruder alarm and **transmission technologies**. In **practical exercises** aimed at technicians, we provide numerous practical tips and tricks. In our **system courses and technical seminars, we qualify you** as a responsible **qualified technician** for IAS or FDAS. We also provide employees in **specialist companies** and planning offices with **in-depth knowledge** of the planning/

configuration of intruder alarm systems in compliance with VdS 2311 and VDE 0833-3 and fire detection and fire alarm systems in compliance with DIN 14675, EN 54.

We have a **special offer for architects, planners, property insurers, and security consultants**. In our basic and advanced courses (G-VAP, A-VAP) we concentrate on protection objectives, guidelines, and the structure of fire detection and fire alarm, intruder alarm, hazard alarm, and access control systems. This enables them to factor in and advise on the increasingly important component of electronic security technology.

In addition, our online webinars/ training videos at www.telenot.com offer you a convenient opportunity of exploring and **expanding your knowledge of the TELENOT products and services**.

E-Learning

Here you can register for a WBT (Web Based Training). This enables you to access the training content from anywhere and **at your own pace – whenever you have time**.

We look forward to welcoming you to one of our training courses. Your TELENOT training team

TELENOT is fun.

Experience the entire product and service range.

Real proximity to the customer is reflected in our day-to-day work. In our personal interactions. Discover what we have to offer and experience what **'Made by TELENOT'** means:

We are pleased to offer you the following:

- A comprehensive sales network with contact persons on site
- A professional technical sales and consulting support team based at our headquarters
- A highly efficient and professional technical hotline
- An extensive program of basic, product, and system training courses
- Comprehensive information brochures about all TELENOT products
- A comprehensive e-learning and webinar program focusing on technical and sales topics
- A quotation and calculation service
- More than 500 Authorized TELENOT Partners in Germany, Austria, Switzerland, Luxembourg, Italy, and other European countries
- A planning service for creating security solutions in compliance with guidelines for intrusion, fire detector, and access control systems for use by technical building services companies, planners, architectural offices, developers, and general contractors
- Commissioning support in the fields of intruder alarm, fire detection, and access control technologies
- Next-day delivery service thanks to our in-house production facilities and exceptional vertical range of manufacture
- Comprehensive technical documentation
- An Internet service portal with technical data sheets, technical descriptions, an info center, system lists, wiring diagrams, online shop, and software download options.
- A newsletter for installers and engineers
- A newsletter for architects, planners, property insurers, and criminal investigation centers
- An advance exchange service
- A repair service

TELENOT does not just make products. TELENOT makes a commitment.

Security is about the reliable and **guaranteed protection of life and limb, people, property, and buildings.**

Security systems – be it intruder alarm, access control, fire detection, or smart wireless alarm systems – must function flawlessly and with uncompromising reliability

- 24 hours a day,
- 7 days a week,
- 365 days a year
- for many years

in order to send **life-saving and existence-saving signals** when it matters the most. The principle of a chain being only as strong as its weakest link certainly applies here – and an **integrated hazard alarm** system made up of different security components is only as good as its weakest link.

Here at TELENOT, we know and understand every “link” of our TELENOT hazard alarm systems. **TELENOT is proud of its manufacturing depth.** For us, outsourcing and cost reduction at the expense of **quality and flexibility** are out of the question.

With this in mind, TELENOT – a **manufacturer of electronic security technology** in the fields of intruder

alarm, fire detection, access control, and smart wireless alarm systems – supports you with **top-quality products**. We at TELENOT aim to offer the **highest quality standards** with regard to development, production and customer service at our company locations in Germany, Austria and Switzerland – now and in the future.

With us, you can rely on **carefully matched security components** and reliable and **long-lasting security solutions**.

**We offer you guaranteed security.
That is our commitment!**

TELENOT accepts no compromise. TELENOT sets standards.

TELENOT sets standards with regard to reliability and quality.

You will only know the value, or rather the true benefit, of a comprehensive intruder alarm, fire detection or access control system once your project has been completed. **After installation, commissioning, and a certain time in operation.** Reliability and durability are decisive factors that impact your reputation and profitability. If these factors don't match, the resulting additional costs will eliminate any purchasing advantages from the outset. In this respect, the price of a professional intruder alarm, fire detection, and access control system can only really be determined when the full picture is considered. This fact is often completely underestimated.

We **focus on maximum reliability** and a **long service life** at the very beginning, from the point of selecting the materials and electronic components for our products. With **90% vertical integration**, TELENOT is your reliable partner with a secure supply chain – for good reason. **TELENOT develops hardware and software for all its security components** in its own development department. Our production facilities combine **toolmaking, plastic injection molding, in-house metalworking, and complete circuit board assembly** for all electronic components. All

individual components undergo multiple quality assurance inspections throughout the entire development and production process.

The interaction of individual system components in a security system, **convenient parameterization, and exceptional ease of installation** are verified in special inspection processes.

We offer you security solutions for the protection of life and limb as well as property and buildings that are worth it.
