

TMCDAS

THE SOUND OF SAFETY

Maximum safety in any emergency

Calm and clear instructions. They are what you need when a building or complex has to be evacuated in an emergency. And they are exactly what TMCDAS gives you. An evacuation system that complies with the strictest safety standards. Reliable, high quality systems that are already in use all over the world, in settings from industrial plants to hotels, office buildings to government ministries.

The added value of specialisation

At TMCDAS, voice alarm evacuation systems are our core business. And thanks to specialist expertise and years of experience, we are the market leader. Moreover, we build all our systems ourselves. Not only does that give us unique know-how, but it also provides the flexibility needed to supply you with exactly the system you want, with a quick turnaround time and answering to your specifications.

Top quality in evac systems

All our Type A evacuation systems are tested thoroughly. Their design, materials and production process have been thought through to the finest detail, so that everything meets the most stringent possible requirements. From control panel to loudspeakers, emergency power supply to amplifiers – it all keeps working, even in the harshest of conditions. We make no concessions: top quality saves lives.

Saving money through smart design

Thanks to our smart design choices, you save on installation and failure costs. We have integrated our loudspeakers and insulators into a single unit, so you will have a reduction in labor costs during installation. And those high-efficiency speakers produce perfect sound even at lower wattages, thus requiring fewer amplifiers. These are innovations which save you time and money. Not only during installation, but also in the long term when carrying out routine maintenance and tracing faults.

John Pieterse

Safety Project Supervisor at Cofely Noordwest BV

“When it comes to evacuation systems, the safety requirements are very strict. Because of that, I only work with partners I can trust absolutely. TMCDAS is one of them: enthusiastic people with impressive technical know-how who stand by their products. They combine good value for money with products that comply with all the standards on every aspect. And they are flexible: we often work with them on large-scale construction and installation projects – which, of course, sometimes give rise to unforeseen situations. At TMCDAS they actively contribute ideas, and together we always find a solution.”

Tim Riedeman

Safety Manager at technical services provider Imtech

“I enjoy working with TMC DAS. Whether we’re talking about product quality, professional know-how or the agreements we reach, I know I can trust them. Even when the unexpected happens. For instance, half-way through a major construction project one of our clients suddenly needed a different model of speaker. In consultation with TMC DAS, we were very quickly able to offer them an alternative product. Customers appreciate that kind of flexibility. Moreover, the products are keenly priced and the design is very well thought out, with smart solutions that speed up installation or save you money on materials. And that gives us a better chance of submitting a successful quote in today’s competitive market.”

The TC 8200 evacuation system from TMC DAS

The TC 8200 is a multifunctional evacuation system, developed entirely in-house by TMC DAS. Combined with one or more control panels and loudspeakers, it provides an extremely reliable evacuation solution. Everyone in the building hears clear spoken instructions, which they can understand wherever they are, even in a noisy environment like a production facility.

- ▼ **Central control** | Even if your complex consists of several buildings, you can control everything from one central point.
- ▼ **Automatic fault detection** | The system automatically checks that all outbound cabling, the loudspeakers and control panel are working properly. Any faults or anomalies are recorded in an electronic logbook so that technicians can trace them easily.
- ▼ **Multifunctional** | The evacuation system can also be used as a general public address system, to signal the start and end of lessons in school buildings or, in hotels and the like, to play background music.
- ▼ **Expandable** | The system can be expanded in any way you wish, including links to a sprinkler activation alert, a gas detection system or a personnel tracking system.

The TC 8200 has proven its reliability at more than 1000 locations in many countries.

From design to maintenance

TMC DAS provides a complete package. We advise on the best solution for your project and then develop it in consultation with you. We manufacture the system itself, and if you wish can also arrange project management, installation, verification and final commissioning. After that, we offer a full service and maintenance programme for all the systems we supply.

Our customers

TMC DAS’ customers include:

- ▼ The Rotterdam
- ▼ Erasmus University Rotterdam
- ▼ Pathé Arena Amsterdam
- ▼ Royal Theatre Carré
- ▼ KLM Headquarters Amstelveen
- ▼ Erasmus Medical Center
- ▼ Tata Steel IJmuiden

Fully compliant products and procedures

Our systems comply fully with all legal requirements, all relevant European standards and all fire safety regulations. And our company is ISO 9001 certified. But TMC DAS is more than just compliant – we are a leader in standardization. Both our systems and our procedures have been approved by a specialist international certification body, meaning that we are entitled to use the CE mark under EN54 procedures. Annual inspections ensure that we still meet the stringent requirements. For us a matter of routine, for you a reassuring guarantee.

Evacuation systems from TMC DAS

- We specialise exclusively in voice alarm evacuation systems.
- Advice and solutions based upon years of experience.
- In-house development of all products.
- Fully certified for maximum safety

Want to know how TMC DAS can help you? Questions about our products and services? Interested in a demonstration, with no obligation? Feel free to contact us for more information or to make an appointment.
