Specialists in Outdoor Wireless
CCTV Transmission Solutions

Secure Outdoor Wireless CCTV Transmission Solutions

Powerful point-to-point and
multipoint links and networks
optimised for video

We design networks globally

We excel in designing bespoke CCTV networks that meet our clients' requirements in every respect. We pride ourselves on our clear vision: delivering innovative security solutions that helps cut costs and enhance security. Wavesight also has the experience and expertise to design and implement the CCTV network solution you require and has considerable global experience in the following sectors:

- Oil and gas production facilities
- Large-scale urban surveillance projects
- Critical national infrastructure
- Ports and airports
- Homeland security
- Border controls
- Transportation
- Military

Innovation in our DNA

Wavesight is a UK-based designer and manufacturer of specialist outdoor wireless network solutions for professional wireless CCTV surveillance all across the globe. Wavesight is a World-class leading innovator in the design, manufacture and supply of wireless communication solutions for the secure, encrypted transmission of data, voice and video. Wavesight is a highly focused, energetic business with a lineage that can be traced back to the creation of EMI in the 1930s, a company renowned for technical innovation that created many of the world's greatest communication technologies.

Wavesight offer a complete suite of professional network design and support services, supporting the effective implementation of wireless video connectivity solutions worldwide, including:

Feasibility studies

In designing a wireless network to meet the requirements specified, an outline project plan needs to be developed which may include all or some of the following key tasks:

- Review the locations of existing cameras and the control facility
- Review the proposal specifications documentation, including any specific requirements and redundancy design features
- Plot the locations using a geo-mapping utility
- Design a draft network schematic
- Conduct a detailed analysis of the resulting path profiles
- Submit network design for peer checking, review and approval
- Finalise and publish network design
- Complete schematics and equipment estimates

Site surveys

If required Wavesight will conduct a full site survey and detailed review of:

- The camera and control room locations
- Key infrastructure such as buildings and existing radio masts which could be utilised to achieve clear line of sight for radio transmission
- The availability of clear radio line of sight from each camera node to an identified location or hub
- Local radio spectrum analysis to identify any existing radio transmissions that may affect the viability and performance of the proposed wireless network
- The use of a cherry picker where necessary to establish availability of radio line of sight between identified points
- The use of laser height measurements of buildings and other obstacles that might impinge on the Fresnel zones associated with each proposed wireless path
- Specific design challenges, especially those concerning the availability of radio line of sight for each part of the network.

Wireless Network Design

Following the feasibility study and the site survey, and based on a budget, our applications team will then design a network custom tailored to the client requirements, comprising wired and wireless (licensed, license-exempt) and integrated with network switches supplied by our recommended technology partners. This allows us to propose a complete communications network solution comprising:

- Simple point to point daisy-chain network
- Simple point to multi-point network
- Partial redundant or fully redundant system with no single point of failure
- Combination of highly reliable standard IEEE Technologies

Commissioning

Wavesight can handle every aspect of end-to-end system specification, commissioning and installation assistance. We provide full support (if required) to ensure the project is delivered on time, within budget and fully compliant with the specification. If technical assistance is required Wavesight are able to:

- Provide installation instructions (including network layout schematics)
- Pre-configure units ready to be installed
- Manage aspects of the installation
- Commission the system

Training

For full in-house product training, The Wavesight Training Academy provides two main courses designed to help with product installation and the other more advanced one is for larger and more complex wireless network design. Wavesight Training Academy courses will help to:

- Provide guidance, advice and mentoring
- Transfer knowledge relating to the design of wireless networks
- Advise on radios and antenna installation

After-Sales Support

Our after-sales service can help manage and maintain your wireless CCTV network – simply and cost-effectively. Within our after-sales team we have technical advisers on hand to provide constant support and peace of mind. We pride ourselves on long standing relationships with our clients, always ensuring an efficient and professional response. We always stress the importance of this ongoing support relationship to ensure you obtain the best value from your network. Managed services, post sales include:

- 24/7 technical support
- A dedicated onsite maintenance repair facility
- Spare or replacement parts anywhere in the World
- Advanced replacements if needed

Wavesight Wireless CCTV Security Solutions

- Megapixel and 1080p quality video images
- Extremely low latency
- Operating on licenced and license-exempt frequency bands
- Rapid deployment
- Cost effective alternative to cable or leased line fibre
- Transmission rates from 54Mbps to 4Gbps
- Connection distances up to 60Km
- Highest levels of data encryption and security
- Easy, low-cost installation
- IP67 rated for the harshest environments

RF Analyser

Wavesight's unique configuration and monitoring tool is included for fast and accurate deployment of all Wavesight transceivers

Network Design Services

Wavesight's team of professional network engineers can assist with site surveys, radio path profiling and complete network design.

Optimised For Short Range Point-To-Point Applications Up To 1Km

WaveSPRINT offers a class-leading performance package optimised for short range point-to-point applications up to 54Mbps (1Km). Extremely compact and unobtrusive, WaveSPRINT is the smallest outdoor wireless link product available.

Optimised For Short Range Point-To-Point And Multipoint Applications Up To 2km

Incredibly compact, the WaveSPRINT-TURBO supports a wireless CCTV link operating at up to 54Mbps (2Km) or up to a full 108Mbps (1Km). Suitable for use in point-to-point applications or multipoint applications in conjunction with a suitable base unit.

Base Unit Optimised For Short Range Multipoint Applications Up To 2km

Incredibly compact, the WaveSPRINT-TURBO MP supports a wireless CCTV link operating at up to 54Mbps (2Km) or up to a full 108Mbps (1Km). Supplied pre-configured as a multipoint base station capable of receiving video feeds from up to 4 individual satellite units.

Mid Range Point-To-Point And Multipoint Bridging Applications Up To 5km

WaveFLOW delivers data rates of up to 108 Mbps (Turbo mode) – providing cabled Ethernet comparable performance to meet the requirements of high resolution CCTV and other bandwidth-hungry applications.

Long Range Point-To-Multipoint Bridging For Applications Up To 40km

WaveMAX offers a flexible, cost effective and high-performance outdoor bridging solution for use in both point-to-point (PtP), point-to-multipoint (PtMP) and networking configurations. The advanced OFDM radio and proprietary technologies used within WaveMAX enable data transmission ranges of up to 40Km and data rates of up to 108 Mbps. WaveMAX is available with an integrated vertically polarised antenna or as a stand-alone version for use with an external antenna.

NEW RANGE

WaveSPRINT[®] N150

Optimised For Short Range Point-To-Point Applications Up To 1Km

WaveSprint offers a class-leading performance package based on the 802.11n standard and optimised for short range point-to-point applications up to 150Mbps. Extremely compact and unobtrusive, WaveSPRINT N150 is the smallest outdoor wireless link product available in its class.

WaveSPRINT[®] N300

Base Unit Optimised For Short Range Multipoint Applications Up To 2km

Incredibly compact, the WaveSPRINT N300 supports wireless CCTV links operating at up to 300Mbps (2Km). Suitable to use as a point-to-point or as a multipoint base station capable of receiving video feeds from up to 4 individual satellite units.

WaveFLOW-N[®]

Mid Range Point-To-Point And Multipoint Bridging Applications Up To 5km

WaveFLOW-N delivers data rates of up to 300 Mbps - providing cabled Ethernet comparable performance to meet the requirements of high resolution CCTV and other bandwidth-hungry applications.

WaveMAX-N[®]

Long Range Point-To-Multipoint Bridging For Applications Up To 60km

Optimised for creating high quality, exceptionally low latency video links, the WaveMAX-N wireless IP transceiver is ideal for backhaul transport of high resolution real time video and is particularly suitable for use with high resolution mega-pixel cameras in applications over long distances. The advanced OFDM radio and propriety technologies used within WaveMAX-N enable data transmission ranges of up to 60Km and data rates of up to 300 Mbps.

wavesight[®] NMS

Wavesight Remote Network Management System

Simply connect WaveNMS to a convenient networked Ethernet Switch to enable full remote management and live performance monitoring of that network segment over the internet using a standard web browser interface. In addition to providing link status, radio signal integrity, data throughput and overall network activity, WaveNMS enables the remote configuration and reboot of any Wavesight wireless link connected to that network segment.
