

05 & 04 the new generation speaker

AMC Baltic proudly introduces the loudspeakers 05 and 04 the first models of a new generation loudspeaker family. Experienced audio engineers have developed the loudspeaker with very responsive woofer diaphragm and tweeter with outstanding clear and rich sound at any volume level, which would not be possible without precise crossover implementation. Robust and durable body, aluminum grill allows to use these loudspeakers inside and outside. We focused on every detail to create loudspeaker's design which perfectly fits in the modern interiors and would be accepted by most of architects.

A built-in 100 V transformer and 16 Ω power tap makes these loudspeakers suitable for background music and public address systems, as well as for home use with low impedance installations.

Big attention has been directed to simplify installation works and adjusting the cabinet for final position. Loudspeakers can be mounted vertically and horizontally, the logo rotates depending on its position. Smart mounting brackets are letting mount and adjust the loudspeakers in a very easy way with wide angles horizontally and vertically.
