

New AMC DMPA light mixing amplifiers

DMPA light is Class-D mixing audio amplifier for 100V or low impedance audio systems. Implemented direct low impedance function eliminates the low-cut filter and 100V transformer interference to reproduce the best possible initial audio signal from the audio source.

Priority microphone input and phantom power to sure easily fit in any public address system. These modern public address mixing amplifiers contain a media USB player with AUX input, Bluetooth and FM radio receivers, 1 microphone input, and emergency mute control. The bass and treble controller gives the possibility to get the greatest sound in any place. This series is designed for public places such as shops, restaurants, gas stations, or any other places that need a compact, reliable, and easy-to-operate audio system for continuous daily use.
