

Diostyl Coatings “a new way forward”

Since its inception in 2008 Diostyl Coatings BV has established itself as the provider of products bringing innovative solutions to customer coating issues in the metal packaging market worldwide. Diostyl Coatings can help you to improve your production processes with cost effective and sustainable coatings.

Diostyl Coatings offers BPA -NI internal coatings that have proven track records for food, aerosol and chemical packaging as well as high quality protective and decorative externals.

Our newest BPA-NI product range includes gold, buff and clear coatings based on the latest resin developments and formulation techniques. These systems were developed for use with hard-to-hold foodstuffs and also to resist most chemicals and paints. Customer tests have proven that specifically waterbased chemicals and paints protection is superior to that of traditional epoxy based materials.

To meet the latest best-practice guidelines regarding carbon emissions Diostyl Coatings has developed a range of waterbased products. The portfolio contains side stripes and overprint varnishes for food and general line.

We are looking forward to meeting visitors to our booth at the Holland House stand at Metpack 2020.
