Revolutionary biobased and biodegradable stake that feeds the plant

Voodstoc introduces a plant label display stake that feeds the plant. In collaboration with the University of Wageningen and Rodenburg Biopolymers they developed this particular stake. During a period of ten weeks it gradually releases the food to the plant.

Voodstoc is not only bio based, but also biodegradable. It fits perfectly in the new way of thinking about the circular economy. Offering a sustainable alternative for fossil fuels, the company uses starch obtained from waste from the potato industry. The raw material for Voodstoc is already in the circular production circle. An excellent alternative to the wooden stakes, which deprives new wood to nature.

AquaTesterPro

The AquaTesterPro measures the most important water values in just a few seconds. This electronic water analyser allows you to check water quality often and easily.

The digital test results are very accurate and they can be sent to your smartphone or tablet via bluetooth. The AquaTesterPro app uses the values for a complete diagnosis and history of the water. You then receive smart advice from Velda to maintain water quality and prevent any problems.

! The AquaTesterPro with freshwater indicators from Velda measures the most important water values in ponds and aquariums – but also, for example, in surface water and groundwater – in just a few seconds. pH, GH, KH, TA, NO₂, NO₃, Cl₂ and CO₂.

! Also available: indicators for testing PO₄ (phosphate) and NH₃/4 (ammonia/ammonium).

COIR PITH - a growing media for Agri/Horticulture Applications

Coir pith, the by-product of dehusking of coconut fibre, is the spongy material that binds the coconut fibre in the coconut husk. As an excellent soil conditioner, it now finds varied uses as a good manure and in horticultural applications as a soil-less growing medium. Coir pith is a substitute for peat moss which is widely in use in European countries and is made available in various forms like organic manure, grow bags, briquettes, discs and more of different sizes.

Let's get glossy - highgloss for every room

The new Glossy collection from LECHUZA brings a hint of glamour to the living room. The planters with high-quality varnished surfaces give rooms an elegant feel. The trendsetting pieces do not only look sophisticated, but also impress with their integrated irrigation system, giving plants access to a reliable water supply. The new Glossy planters are the must-haves of the season.

Following a high-gloss makeover, the popular LECHUZA planter CUBE now comes in three additional brilliant high-gloss shades. The high-gloss surface forms a modern contrast to green houseplants or delicate flowers, making CUBE Glossy a real eye-catcher. The larger CUBE Glossy Triple offers a lot of space for flowers, herbs or smaller shrubs and serves as a sophisticated highlight that will give any living space a glossy feel. With its elongated shape, the new planter can be an impressive herb garden on the windowsill, a garden for succulents on the living room shelf or an unusual flowering decoration on the table.

With the Green Wall Home Kit Glossy by LECHUZA, a well maintained, hanging garden that gives a new perspective on green and flowering plants can be created in no time at all. If you don't have much space or simply enjoy unusual plant designs, you can now bring a touch of nature to your very own wall. As classic wall greenery, as creative holders for make-up tools in the bathroom or as pencil box in the children's bedroom – the Green Wall Home Kit Glossy is a true all-rounder and highly versatile.

To make sure that caring for your plants doesn't get too stressful, the LECHUZA irrigation system will look after the water supply for your green flatmates. The plants can be placed in the planter in their pots, eliminating the need for time-consuming repotting. A wick, which is placed in the pot from below, transports moisture to the roots. This is how easy it can be to take care of your plants.

Malus 'Royal Raindrops®' exclusive by Ley

Eye-popping magenta pink blooms, deep purple cutleaf foliage, sparkling red fruits and bright fall color give all-season appeal to this easy-care flowering ornamental. Superior disease resistance, adaptability, plus heat and drought tolerance make this unique crabapple a crown jewel among trees.

Refined, uniquely shaped leaves emerge glossy deep purple and maintain their rich color through the heat of summer. Fall color is a madly of bronze, orange and purple. Tiny persistent, bright red fruits appearing in late summer are prized by wildlife and add winter interest. Strong branch angles and upright growth habit minimize the pruning and shaping needed to develop a balanced canopy. More vigorous than other purple-leaved cultivars, 'Royal Raindrops®' Crabapple quickly gains caliper while developing a sturdy, well-tapered trunk.

Vertical Gardens - Roof Gardens

Vertigan presents a range of innovative developments in vertical gardens - "Indoor" at home, in the working place, in the office. Can be combined with hydroponic system and "Outdoor" to cover concrete walls, house facades, fences, concrete pillars, bridges and public buildings.

All products are equipped with automatic irrigation systems.

For roof gardens Vertigan has developed a smart system to cover the roof in a green garden where you can grow flowers, grass, green vegetation, organic vegetables and even ornamental trees or fruits.

The system allows to make any flat roof of the parking lots or any unused flat roof into a beautiful garden. All with a do-it-yourself system and like the vertical gardens, equipped with automatic irrigation systems.

All systems have no direct contact with the building walls or floors, so no moss is formed, which harms the building.

Vertical landscaping and roofs gardens add an additional layer of thermal insulation to existing insulation systems.

The innovations focus on very easy assembly, easy maintenance, water saving, fertilizer savings, and ultimately very important, low prices. All products can be set without professional help.

Thanks to the modular system, you can start with a small base unit and expand it to a very big magnificent garden. All extension units matched together as Lego game bricks.

Another development is "mobile vertical gardens". They serve as mobile green partitions in banquet halls, hotel lobbies, wedding festive events background, fairs and exhibition pavillons.

All facilities are decorated with live plants and equipped with automatic irrigation. Replacing the plants to change the design takes only a few minutes. The systems are equipped with quiet and hidden wheels so they can be moved easily.

Livium, a real work of art

Livium is a symbol for the 'next generation' in Anthuriums. The natural veins give a beautiful look and feel to the variety. This novelty really has the X-factor. Anthura is proud of this beautiful breeding result, which is likely to lead to a completely new line of pot Anthuriums in the future. The natural outlines and patterns on the spadix are particularly beautiful and give it a really special appearance.

The plant is suitable for pot sizes 14 and 17 centimetre. The flowers are medium in size and the predominant colour is red with clear white coloured veins in the flower. The shelf life of the plant is good to excellent.

Very smart: Artificial Intelligence in horticulture

As a new module in the **g-pda.®** family, JayVee Green Consult Jens Varnskühler presents the new **g-pda.®PlantDoctor**: using AI (Artificial Intelligence) and ML (Machine Learning) to increase your efficiency the smart way.

When checking your cultures just take a photo of a symptomatic leaf or a pest with your smartphone and the **g-pda.®PlantDoctor** immediately tells you which disease it is. Now scan the QR code of the affected stock and the **g-pda.®PlantDoctor** will suggest a treatment. In doing so, the already applied agents, incompatibilities and legal regulations are automatically taken into account.

In the next step, **g-pda.®PlantDoctor** checks the current inventory of the selected agent, calculates the area to be treated, the tank recipe and creates a task that you can assign directly to an employee.

Hybrid lighting solution for professional greenhouses

BLV is one of the very few providers in the market that offers a complete range of assimilation lighting: From lamps and power supplies to complete luminaires and from HPS or MH to LED, all from one source and perfectly synchronised with each other.

BLV introduces a hybrid solution: the well established, efficient and reliable HPS lights in combination with high performance LED interlighting. This hybrid solution is designed for greenhouses with high wire crops that aim for the best standards.

The HPS luminaires are equipped with a lamp and power supply produced in BLV's factories in Europe. The compact and solid design provides best-in-class PAR values and spectra for optimum plant growth. Safety, reliability, efficiency and durability are guaranteed. The open reflector allows an easy heat dissipation that increases the lifetime of the lamp. This can be translated directly into a reduction of maintenance and replacement costs.

The LED interlighting luminaires are available in different spectra, adapted to the needs of your crop! The passively cooled luminaire has been designed to optimise efficiency, light homogeneity and light absorption by the plants. The anodised aluminium housing is non-corrosive and classified with an ingress protection of IP66. Installation in a continuous line along the rows of plants is made easy thanks to feed-through wiring.

Hortiviv – Enriched substrates of the future

In the past few years there has been a large development for the selection of beneficial organism capable of enforcing plant growth. Through creating natural symbiosis with plant roots, several of these organisms have shown to improve the resilience of plants. Greenyard Horticulture developed an innovative technology to bring these benevolent microorganisms to life, so they have a direct action at the plant roots.

Hortiviv® is a substrate inoculated with fungi, directly settled in the substrate in their living form. For two consecutive years, the University of Ghent and ILVO (Flemish institute for agriculture) used this inoculated substrate to conduct experiments during strawberry cultivation. These experiments showed that strawberries grown on the inoculated Hortiviv® substrate are more resistant to decay and improving thus significantly the shelf-life.

In addition, Hortiviv® can also be used for root sensitive tree cultivations, where it also has the ability to stimulate the plant growth and root vigor. Hortiviv® is allowed on the Belgian market for use in substrates (Derogation EM736.E).

PLA Sleeves

You see and hear it everywhere: horticulture also needs to become more sustainable. That is why Koen Pack has added some 100 per cent biodegradable sleeves to its standard range. These sleeves are made of a durable and naturally degradable material. They are printed with water-based ink which is better for the environment.

What are the advantages of PLA (Poly Lactic Acid)?

This material is not made of fossile fuels, in contrast to traditional plastics. These sleeves are made from renewable sources like sugar cane and corn. Because these sleeves are biodegradable, they can be composted after use. The consumer can simply throw the sleeves into the green waste bin together with the leaves. It is 100 per cent industrially compostable.

Biodegradable ground cover

The ground covers AmTec GCSBD-130W are produced on wider width Sulzer looms. Ground cover is UV stabilized and permeable to air and water and ecology safe alternative to herbicide use. Since 2017 the company was trying to develop a biodegradable woven ground cover which has finally been a success. Shri Ambica Polymer can offer this PLA based biodegradable ground cover with OK bio-based 4 star having a life of three years when exposed to UV.

Standard weight: 130 gsm

Standard width: 1,00; 2,00; 3,00; 4,00

Standard roll length: 100 metre

Available colours : black

Any other width and length can also be customized upon prior request.

TROLLEY M2

The UNI-TROLL Trolley M2 is designed to carry two 600 x 400 millimetre ISO modular boxes or plastic crates per shelf level.

Underneath, two swivel and two fixed Ø125 millimetre castors ensure easy maneuverability, and the strong and durable 40 millimetre PUR tread ensures noise-reduced rolling. Eight post profiles and four post extenders can be placed safely in the trolley base frame. This protects the posts from being damaged and makes them easy to handle.

A Trolley M2 frame can also be placed on the top of the posts and you can take advantage of having a double-layer trolley load for the full truck height on long-distance transportations. Trolley base frames can be stacked on top of each other to reduce cost when empty trolleys are returned.

Measures and capacity

The Trolley M2 base frame is 891 x 616 millimetre and the height from ground level is 270 millimetre. The inside length is 815 millimetre.

Its unloaded weight with posts is 47 kilogram (base frame 25 and posts in total 22 kilogram). The trolley's carrying capacity is 400 kilogram SWL (Safe Working Load).

When stacked on top of each other, the stacking height of the first layer is 270 millimetre. When stored empty, twelve base frames can be stacked on top of each other to reach a height of 2580 millimetre.

Shelves

Trolley M2 shelves are available in three different variations:

The Shelf M2 PPGF is a plastic version that carries 40 kilogram UDL (Uniform Distributed Load) and is stackable to reduce the volume when returned empty. Its unloaded weight is 4.7 kilogram. The material is impact-resistant and in a new design with shock-absorbing high-tensile steel rods.

The Shelf M2 PWS is the plywood stackable shelf version, which can carry 60 kilogram UDL. Its unloaded weight is 3.9 kilogram.

The Shelf M2 PW is the plywood non-stackable shelf version, which can carry 60 kilogram UDL and is placed in the posts when returned empty. Its unloaded weight is 3.7 kilogram.

Wireless soil moisture probes

Measure soil moisture completely wirelessly with the single-depth soil moisture probes. Probes take hourly measurements and are suitable for all soil types. Access data via the free Sensoterra app, available on mobile or desktop.

Get 24/7 insights into what's happening in your fields, from anywhere, with data accessible at your fingertips.

Built for the field, the probes have a simple, rugged design, measuring at depths of 15, 30, 60, and 90 centimetre, are suitable for all soil types, and measure at 99.5 per cent accuracy. Each probe comes with LoRa connectivity for a lifetime of three years, and a one year product warranty.

Installation is quick and easy, requiring a smartphone, a probe, and a rubber mallet. After creating your free Sensoterra account, scan the probe's QR code into the app, set the soil type, and hammer into the soil.

Happy with Calla

Elegant shapes, clean lines – Calla offers ample inspiration for a mindful moment in the madness of modern times and offers nothing but flowering, empowering happiness. The excellent reputation of this flower goes back to the Romans and Greeks in ancient times, who saw in Calla a gorgeous symbolic chalice for toasting to life.

Life is good

Calla is still seen as the bringer of happiness. It is a symbol for finding comfort and joy in small things: a fresh cup of coffee, a nice gesture, a sunny day, exchanging a smile with a passing stranger and all other things that make life a bit more beautiful every day.

Colour your day with Calla

The good vibes of Calla become even stronger when you add the magnificent colours of this flower. Red for love, pink for new beginnings, orange, yellow and green for joy, purple and black for a bit of drama and white for serenity and pureness. There are even bicolour callas, just in case it is impossible to choose. Lovely to get and amazing to give: there's nothing like sharing happiness.

Benchmarking 4.0

The benchmarking portal "Betriebsvergleich 4.0" is now available to all horticultural enterprises in Germany. With little effort you can avail of a routine check-up for your enterprise that reveals need for action and highlights where economic potential is not yet fully exploited.

You can also use the results from the benchmarking portal for communicating and setting goals for your staff. In addition you can show economic competence and your eagerness to develop the economic performance of your farm during loan acquisition.

The complete functionality of the benchmarking portal can be used anonymously, if you apply for an access token through the official extension service or your tax advisor. Using the portal is possible also independently by registering yourself. In any case, the use of the benchmarking portal is free of charge.

The portal is accessible at <https://benchmarking.zbg.uni-hannover.de> (in German only). Please check out the given example assessment reports for the different horticultural branches even without registration. The cockpit view gives an overview of evaluation results in terms of the four most relevant dimensions:

- | profitability in the current year
- | profitability in the past year
- | liquidity and
- | personal drawings.

Further gauges show productivity indicators in terms of labour, land and operating profit margin relative to the benchmark farm data from the network.

Carry Packs

The plastic plant packaging ensures that your plants are displayed at their very best in the shop. Even when the plants are packed in plastic, the transparent material and high-quality packaging ensure that they are displayed in a way that does justice to the appearance of the plants themselves.

Carrypacks

Voges Verpakking has developed a carrypack design for large plants, allowing you to deliver the plant complete with its pot. This is ideal for cacti in particular, as it is a way for you to protect customers and other items in the trolley from the sharp spines of the cactus. These types of plant packaging also allow you to make combinations, you could package three different cacti together, for example.

Codema's mobile gutter system

Codema has, based on its knowledge and experience, developed an advanced automatic moving gutter system for fresh lettuce, herbs, micro vegetables and baby leaves.

The moving gutter system optimizes the harvest of the crops. The system can be adapted to the needs of the customer. Grower Meier Brothers explains: "Lettuce harvest is about four to five times higher with NFT." This system is more hygienic and saves water during cultivation and also during the cleaning of the lettuce for sale. The production process can be automated, which saves labor costs. Moreover, the product has a longer shelf life because the lettuce plants are harvested and sold with the roots attached. NFT provides a good return on the investment."

Codema has tested the system, thoroughly. "Our customers can now count on a predictable, reliable harvest 365 days per year. We currently have different types of lettuce systems available: traditional banking systems, floating lettuce and (semi-) automated moving gutter systems."

3GG Gear Motor

Introduction of 3GG Gear Motor

1. The failure rate of the limited switch is reduced to 5 ‰ from 5%.

At present, the most common quality problem of the gear motor is the damage of the limit switch control system. The main reason is that the self-locking performance of the gear motor fails to be qualified and the braking distance is too long. The statistical results of advanced gear motors show that when the braking distance is less than 10 mm, the failure rate will be greatly reduced.

In addition, it is predicted by the engineers of world important users that the braking distance of 3GG gear motor is less than 5 mm (5.2 rpm) and the failure rate is reduced to 5 ‰ from 5%.

2. Self-locking performance is excellent, to meet the high precision window system.

3GG adopts the last stage worm self-locking transmission system, which greatly improves the self-locking performance. Even the braking distance of the of 5.2 rpm gear motor (usually 2.6 rpm) can reach less than 5mm, which fully meets the requirements of high-precision windowing system and prolongs the service life.

3. Adding overload protection and power phase loss protection function.

3GG gear motor adds overload protection and power phase loss protection functions to the limit switch control system. When the three-phase power supply becomes two-phase, it automatically stops. When the load exceeds 1.5 times the rated load, it also automatically stops. After troubleshooting, the motor runs again, thus greatly reducing the number of after-sales service.

4. Adding the manual opening and closing device for power failure.

In the animal husbandry industry, when the windows are closed, the indoor temperature rises rapidly if there is power failure, which affects the growth of indoor poultry or causes a large number of deaths. Manual devices are now added, which when the power is off can be operated manually to open windows or to draw curtains to ensure the normal operation of livestock houses or greenhouses.

GC WiFi

The light recipes of this grow light are controllable by GC Signal. The GC WiFi offers even more options for customisation through pre-set and user defined operating modes.

It is also possible to simulate sunrise and sunset or to control the distribution of light in real time – all conveniently with the Greenception App.

The integrated five light channels make this Greenception product unique.

With these varied possibilities, plants can not only be compressed: Colour, flowering time, active ingredient and vitamin content as well as taste can be influenced in a targeted way.

At the heart of each cluster is the highly efficient full spectrum COB chip, which is complemented by eight smaller SMD chips.

The COB chip emits a light that the human eye perceives as white. In this way you can observe the plant without additional lighting and detect diseases or pests earlier.

Area of application

The GC WiFi is a compact LED module for grow boxes up to 75 x 75 centimetre. Due to the individual light recipes with their many options and the control via GC Signal and App, this grow light is a professional solution for demanding users.

Phormium cookianum 'Blondie' PBR

Key Features

- | Unique weeping plant habit similar to a Chlorophytum
- | Fine narrow long variegated foliage
- | Outstanding container specimen

Characteristics

Hardiness: USDA Zone 8. (15 Fahrenheit or minus twelve degrees)

Foliage: Unique narrow weeping, cream and green variegated foliage

Habit: Tight clumping habit; weeping foliage give a unique distinctive look. 0,90 x 0,60 metre (at maturity)

Culture: Best grown in part shade; feed regularly with high nitrogen

Additional Comments: Plants will exhibit best color when grown in part shade and fed weekly with a well balance fertilizer high in trace element. Remove old foliage at the base and keep in active growth. Plants will loose color with age if not tended correctly.

Uses: Specimen containers, borders, mass landscape planting

Jumbo Jumbo Yellow - the crispy touch

Yellow, yellow and yellow again: The Jumbo Jumbo Yellow has remarkable big flowers with an intensely bright yellow colour and a heart that turns into orange pollen when the plant gets older. The unique structure of the 'crispy paper like' petals will grab your attention straight away. Its easy to grow, lasts long and blooms early. Insider tip: The flowers can be harvested to use as perfectly dried flowers or fresh potpourri.

The Jumbo Jumbo collection puts a smile on your face right away when you touch it for the first, second and even third time. Jumbo Jumbo is a collection of Xerochrysum (Bracteantha) with very big and long lasting flowers and a unique 'crispy' structure that reminds you of thin paper. There are multiple Bracteantha on the market but the Jumbo Jumbo variety is way stronger, has better branching and is earlier blooming. In addition, it is very easy to propagate and to grow and it has a strong garden performance.

Basewell™ and GreenGuard Poinsettias

Dümmen Orange launches Basewell™ and GreenGuard Poinsettias.

Basewell™

In the Innovation Kitchen visitors can experience the innovative and sustainable ways of working. A lot is going on in the kitchen, Dümmen Orange officially presents Basewell™ for the European market with trial packages for pelargoniums. Basewell™ is a new product form produced at off-shore farms that combines the benefits of unrooted cuttings and rooted cuttings. It is more mature than an unrooted cutting, with visible root development making it possible to plant directly into a finished container.

Basewell™ is fast and efficient to transplant with no losses. The rooted cuttings respond quick after transplant and grow uniformly. Basewell™ allows growers to significantly reduce labour and reduce propagation greenhouse space. Basewell™ allows growers to adhere much closer to their planned schedules by further eliminating the variables in the propagation processes and delays in liner to production transport processes.

GreenGuard Poinsettias

In another part of this booth, Dümmen Orange presents its new sustainably grown poinsettias, the latest result of its GreenGuard protocol ('Minimal Chemicals, Maximum Quality'). With an eye for innovation and sustainability, Dümmen Orange is developing a future in which the level of chemical pesticides on its cuttings is reduced significantly to protect people and the environment. In addition, this program allows the company to fulfill customer requests as the demand increases for sustainable products grown with fewer chemical pesticides. The clear path to meet these production demands is to follow the principles of Integrated Pest Management. More products will follow soon.

Hydrangea RUNAWAY BRIDE 'Snow White'

RUNAWAY BRIDE® is an entirely new class of interspecific Hydrangea hybrid that flowers not only at the end of the stems, but also from all lateral buds from the previous season.

The lacecap inflorescences are bordered with large, elegant sterile florets in pure white, often flushed with pink during cooler weather. Due to the unique flowering habit and garland-like stems, this type of hydrangea can be grown into totally new product forms – in addition to standard pots/containers, RUNAWAY BRIDE can also be grown in hanging baskets, on trellises, pyramids, columns and more.

The unbelievable profusion of flowers, its elegant beauty – and the fact that this variety has proved to be reliably remontant all summer long – are attributes that will make this variety very popular with home gardeners. The vigour, elegant spreading plant habit and good hardiness make it for a fantastic garden and container plant.

New Imara® from Syngenta Flowers delivers breakthrough in impatiens walleriana

New Imara® from Syngenta Flowers delivers breakthrough in impatiens walleriana

- | More resistant to downy mildew than ever before
- | Imara is bringing back the gardener's favourite plant
- | First to market with new and improved impatiens walleriana

Syngenta Flowers is proud to announce the return of impatiens walleriana with the new series, Imara®. Launching in the U.K., Germany, France and the Netherlands, this breakthrough impatiens walleriana is stronger and more resistant to downy mildew than ever before.

Since the widespread outbreak of downy mildew in 2011, the impatiens walleriana market has drastically declined. However, Imara® offers disease resilience so growers can bring this popular plant back into production and retailers can reinvigorate the market by putting a consumer favourite back onto shelves.

“Syngenta is a research and development company. We do innovation, so developing a new generation of impatiens walleriana has been important to us,” said Michael Kester, Global Head of Syngenta Flowers. “We are very excited to be first to market with this breakthrough and bring back a product that will delight consumers with outstanding performance in sun, shade, rain or shine. We know this will translate to a strong, sustainable consumer demand to benefit retailers and growers.”

In addition to its resiliency, Imara® offers growers a reliable, low-maintenance and economical plant for greenhouse production. It is robust and durable, holding up well during transport so plants stay in top shape when moved to retail.

IPM ESSEN

A powerful trio against fungus gnat larvae

Almost every area of horticulture is familiar with fungus gnats and their larvae. Especially seedling producers are afraid of them. Fungus gnat larvae are not choosy for roots, whether poinsettia, bedding and balcony plants, herbs, vegetables, hardwood cutting or herbaceous perennials, their diet includes all those roots. Chemical crop protection can hardly provide any possibilities for action. Therefore, it is great that biological plant protection can offer good alternatives to cultural and biological techniques (such as yellow catchboards for monitoring or drought stress).

The powerful trio consists of the nematodes *Steinernema feltiae*, the predatory mite *Hypoaspis miles* and a BTI. *Steinernema feltiae* are threadworms that are being poured into the plants. They are either contained in clay granules and then dissolved in water or they are poured as ice nematodes. *Hypoaspis miles* lives on the soil and, besides fungus gnats larvae, also eats thrips and springtails.

They are being scattered onto the plant substrate in the carrier material, a mixture of vermiculite and soil. *Bacillus thuringiensis israelensis* (BTI) is being poured. The methods described are used preventively in the first week after seeding, pricking, plugging or planting and should be, according to the requirements of the plant culture, pursued continuously.

Grafted Hot Peppers

Hishtil's grafted hot pepper plants are sharp flavoured, vibrant and beautiful and help increase yields.

The product list of grafted hot pepper plants includes the following types:

- Capsicum hot pepper 'Magnum' (Habanero) Grafted
- Capsicum hot pepper 'Maya' (Habanero) Grafted
- Capsicum hot pepper 'Touro' (Jalapeno) Grafted
- Capsicum hot pepper 'Budapest' (Hungarian) Grafted
- Capsicum hot pepper 'Fire Flame' (Chili) Grafted
- Capsicum hot pepper 'Dorset Naga Red' (Morich) Grafted
- Capsicum hot pepper 'Jamaican Yellow' (Scotch) Grafted
- Capsicum hot pepper 'Big Devil' (Chili) Grafted

Like other grafted vegetable plants, grafted hot peppers have proven to be superior performers, having robust growth, longer fruiting and higher resistance to soil disease. Benefits outweigh costs when factoring in an increase in yield and a reduction in chemicals for disease prevention. These advantages make them clear favourites for commercial growers and home gardeners alike.

Pot Roses with enchanting Fragrance

The Queen of Pot Roses – the international acknowledged rose breeder Rosa Eskelund from Roses Forever – presents a brand-new series of long-lasting fragrant pot roses with large flowers.

Pot roses with fragrance are very difficult to breed, and when you add long life of minimum three weeks and large flowers, you really have a challenge ahead of you.

Nevertheless, rose breeder Rosa Eskelund took up the challenge and after ten years of breeding she is now ready to present four amazing varieties with large fragrant flowers and a beautiful dark green foliage. All four new varieties have a very pleasant fragrance with large long-lasting flowers and are for both indoor and outdoor use, so Rosa Eskelund, who already has been breeding a long line of international bestsellers sold under the brand names Infinity® Roses, Roses Forever® and Love Forever®.

Four new varieties

The new varieties will be marketed under the brand name *Love Fragrance Forever*. The new varieties are all ready for the market from March 2019.

Stop and smell the Roses

Rosa Eskelund is a breeder with passion for her roses. That is also why her new fragrant pot roses will be presented under the slogan *Stop and smell the Roses*. "I heard this expression about *Stop and smell the Roses* some time ago. It is so true, because we all live busy lives, and it is important sometimes to "*stop and smell the roses*" and see our lives with a deeper appreciation of the world around us. It can help us to slow down and be aware of all the little things that makes life so beautiful. It is more than ever important to take a break and be present in the moment; otherwise those moments will pass you by", says Rosa Eskelund.

Hyperion™ Greenhouse LED grow light

Plessey Semiconductors have specifically designed the Hyperion™ grow light to deliver greater returns for commercial growers. The Hyperion™ grow light can work alongside or can replace high pressure sodium grow lights. With Hyperion™ you need less units for any given lighting installation than with competitor LED grow lights. Being 1:1 equivalent with existing 1000w and 600w sodium grow lights makes Hyperion™ easy to install and to use for growers, installers and greenhouse builders.

Key features

Up to 1800 µmol/s and 1000 µmol/s light output options

Equivalent to 1000w and 600w sodium grow lights

Up to 40 per cent energy saving versus sodium

Up to 3.0 µmol / joule efficacy (after driver and optical losses)

100 per cent LED or hybrid with HPS installation

Key features continued

IP66 rated for full pressure power wash cleaning

IP68 rated fan on Hyperion™ 1750. Dust tight and prolonged immersion

Range of proven spectrums for different applications

Tailor-made spectrum to suit grower requirement

Low shading and installation costs

Five years guarantee/ 25,000 hours

Leasing options

Benefits

Fewer units required per install than any competitor LED fixtures

Less overall shading than any competitor LED fixtures

Lower installation costs

Install on existing trellis to avoid extra c-profile cost and shading

Greater flexibility on lighting design and positioning

Even light distribution possible between 5 metre poles

Options

Reflector accessory to ensure uniformity at the edge of installations

SmartStaff - the best staff ever

Finding and retaining good staff is quite a challenge. Looking for suitable people takes up time and money.

With SmartStaff from WPS, you will get the best staff you'll ever have.

Integrated logistic system

SmartStaff consists of five modules that put the plants in the trays, wrap them, label them and get them ready for transport. Fully automatic and without any human intervention.

All the modules are designed to integrate perfectly with each other as well as the rest of your system.

Easy to integrate seamlessly into existing WPS systems, both in terms of the hardware and software.

AS 1200 - new spraying procedure for plant protection

With the AS 1200, Birchmeier Sprühtechnik AG has developed a new device with air-supported spraying technology. The device combines the benefits of conventional nozzle spraying with a controlled air stream. As distinguished from a mist blower it uses the very latest electronics and rechargeable battery technology.

At the heart of the AS 1200 is an easy-to-use, portable blower with an electronic control system and an integrated spray nozzle. Spray solution is fed into it at a pre-set pressure via a hose from a rechargeable sprayer and mixes optimally with the air stream. The blower power can be set to various levels depending on the application. From a gentle breeze when working next to a wall of leaves, to a powerful hurricane, when working at a distance of ten metres or more - everything is possible. With this new process, users can penetrate existing plants better. The AS 1200 is quiet and produces no exhaust gas.

The blower is designed as an additional device and works together with a sprayer from Birchmeier's «Accu-Power» line. These rechargeable devices developed by Birchmeier in recent years have received a number of international prizes for innovation. Anyone who owns a rechargeable backpack sprayer from Birchmeier can combine it with the blower. However, the blower requires an additional high-performance rechargeable battery. This is designed to allow several hours' spraying depending on the blower's power setting. The latest electronics ensures straightforward, reliable operation. This device too is "Made in Switzerland".

Nature´s Melody - Symphony Tunes

New in the Nature's Melody range at Wagner Life Design is the Symphony Tunes wind chime.

The handcrafted Symphony Tunes wind chime convinces through its elaborate workmanship and high-quality finish. The five thick tubes made of partially recycled aluminum are finished with a premium powder coating. Each tube is precisely tuned. The canopy and the sails are made of rubber wood in walnut color. Through the four clappers a symphonic, long-lasting sound is achieved.

The wind chime is suitable for in- and outdoor use.

The article SYM48BK has the dimensions 19 x 19 x 121 centimetre and weighs about 2.1 kilogram.

Spical Ulti-Mite: New sachet improves spider mite control

Following the success of a newly patented packaging concept by Koppert Biological Systems, [Spical Ulti-Mite](#) is now available in a high-tech foil sachet that ensures consistent performance in variable climatic conditions. Compared to other regular paper sachets in the market, the Spical Ulti-Mite foil sachets perform up to three times better. Trials have proven that Spical Ulti-Mite consistently delivers higher numbers of predatory mites under challenging conditions.

Extensive research has resulted in a sachet that creates a better environment for the predatory mite to build up its population. The superior quality of the foil ensures the breeding system is better protected against environmental conditions that may affect the mites emerging from it. The sachet is narrower and slightly longer and gives the mites the very best conditions to develop even more swiftly and strongly.

Spical Ulti-Mite, which is widely used to control spider mite in a variety of greenhouse crops, can now also be applied to outdoor crops such as citrus and grapes. With the introduction of Spical Ulti-Mite, Koppert aims for more security for both grower and crop.

The new Spical Ulti-Mite sachets can be disposed of together with the crop waste. The sachet is made of a newly-developed foil that conforms to the required industrial compostable standards. In addition, Koppert Biological Systems has reinforced the hook from which it can be attached to make it even more robust.

The greener side: Botanical by Scheurich

Botanical by Scheurich now expands the popular Urban Jungle, with the new Tropical Garden and Palm Garden, making the presence of green plants once again a lifestyle choice with the feel-good factor guaranteed. The broad-leaved decorative pot designs appear realistic and are eye-catching a real recipe for relaxation. They are perfectly suited to the zebra plant (*Calathea zebrina*), monstera (*Monstera deliciosa*) or parlour palm (*Chamaedorea elegans*).

Green living knows no boundaries. A natural lifestyle harmonises wonderfully with Scandinavian design and transforms a classic, cosy atmosphere into the on-trend "Hygge", and everyone can use a little more of that! Botanical is available in sizes up to XL and makes greenery centre stage without compromises. Put on the floor, small urban-living gardens emerge, which create fresh air so that you can breathe and relax.

Pictures, pillows and blankets featuring leaf motifs as well as use of the colour sage green, co-ordinate well with these new cover-pots. Interesting arrangements can be created by combining Tropical Garden and Palm Garden with the popular Scheurich cover-pots in Panna and Anthracite.

To keep the green oasis dry, these high quality cover-pots are manufactured from 100 percent waterproof ceramic.

GreenPlan

Manage your production planning and economic forecast: GreenPlan is a planning software designed for pot plant growers.

GreenPlan is highly focused on precise timing of sale and has a number of features making it easy to assure that the right mix of varieties and colours will be available in due time; it makes it immediately visible for the planner, whether a production is candidate for up scaling or down scaling.

- | Forecast earning at crop level
- | Plan after your peak sales
- | Planning on day or week level
- | Overview of production and consumption of cuttings
- | Multiple cultivation recipes per variety
- | Graphical plan over your space consumption
- | Calculate the culture's consumption of heat, electricity, CO2 and growth light
- | Price calculator for Added Value

Benefits for the user:

- Easy use
- Easy look at planning alternatives
- Production plan and budget in the same process
- Quick overview of profit, costs or hours consumption
- Quick presentations to colleges on screen or handouts

Flowerbox

The trendsetting box which has a huge popularity all over the world, is now available in European florist supplies as well – the sophisticated decoration of interiors and the embodiment of the perfect gift now starts its conquering journey.

Flowerbox is versatile, elegant and affable. Each box is a work of art, where – thanks to the translucent surfaces – the flowers are visible from all sides. It can make any occasion unforgettable. It not only keeps the memories of the celebrations long, but also the freshness and beauty of the flowers placed in it, so it is a unique product for florists as well.

Thanks to the help elements in the box, the flowers can be placed easily and in a variety of ways, as well as they keep the original shape of the composition. Using this box you can assure long lasting freshness up to two weeks for the flowers, whether these are roses, tulips or ranunculus. It is also a product of great practicality: easy to transport, not fragile. It closes securely so even by moving or transporting the box the flowers in it cannot move and the water cannot run out.

Its unique look and exclusivity can be enhanced by the own stylish logo of the florists, so the Flowerbox also provides a special tool for self-promotion. This high quality product is foremost in Europe made in Hungary to supply the European market in a quick and creditable way.

PAT with new developments

The continuous development of the ERP software PAT brings many enhancements and adjustments for the users also for 2019. With the beginning of the migration to PAT-Enterprise, PAT is made future-proof to be able to use current and future technologies in the coming years. This is shown, for example in the improved possibilities of scanner use.

By networking different modules, PP-Area, the area planning of Plug-Plant, can be used without any additional effort. The evaluation of the areas can be updated here without having to collect additional data. The data maintenance in PAT is sufficient for this.

The web portal of Plug-Plant also retrieves its data from PAT. Thus, it is possible to provide information such as orders, delivery processes or availability, customer-specific on the Internet.

For the sales force, there is the new version of PATplus. Now the data can be processed by different suppliers. New orders can either be exported via e-mail as an excel sheet or for a fully automated import. Various customer requests have been integrated into new functions.

In combination with the mail program David and the financial accounting of GDI, Plug-Plant offers a package of coordinated programs including personal, direct support with specialists from the green sector.

SANANBIO is backed by the world's largest LED chip manufacturer

SANANBIO is backed by the world's largest LED chip manufacturer, Sanan Optoelectronics. The company does not only bring large-scale manufacturing capabilities, but also an R&D team capable of customizing and designing lighting to the specific customer or plant needs.

The easiest way to achieve effective agricultural lighting is to provide a spectrum of light that best replicates sunlight or by providing the necessary spectrums / color combinations for specific functions. Color combinations vary depending on region, time, temperature, plant, plant cycle, production targets and many other factors.

SANANBIO has all the basic colors needed for replicating sunlight and activating specific functions for agricultural lighting. For any part of the spectrum where additional colors need to be added to the spectrum or additional light functions are needed, there are different SANANBIO color LEDs available for customer selection and tuning.

SISSI STRAWBERRY - the world's first strawberry tree

SISSI STRAWBERRY is a vertical planting system specially designed for planting strawberries on the balcony, terrace or in the garden.

SISSI STRAWBERRY has a modular design and is available in four different versions – the right version for every location. The cultivation of healthy strawberries makes fun and is simple: The clever product design simplifies planting, watering and harvesting.

Last year PAUL POTATO, the world's first professional potato tower, was the highlight of the fair. This year his little sister SISSI STRAWBERRY will be in focus.

RootBarrier® RollRib®

The RootBarrier® RollRib® is an innovative root guidance system on a roll and is made of 1.5 millimetre high density polyethylene (HDPE). The RollRib® has integrated vertical guidance ribs and is 100 per cent recyclable. This system is easy and faster to install than alternative products due to the different lengths of 21 and 75 meters.

In addition, the RollRib® is easy to cut to the desired length thanks to the cutting line that is on every meter of the roll. With this system roots are guided carefully downwards. Because it has guidance ribs every 18 centimetre, it can be placed either in a line, in a square or in a circle surrounding the tree. The RootBarrier® RollRib® has integrated soil anchors, which prevent the tree roots from pushing the RollRib® up. Sections of RollRib® are easily and quickly joined by means of the enclosed screws.

Innovations for steaming

Inefficiencies and progressive resistance with weeds and diseases as well as prohibitions and restrictions for herbicides are drawing increasing attention to steaming. Steaming methods can be used in all sectors of horticulture – both in the greenhouse and on open land. The steam boilers from MSD are the only ones in the field of steaming to meet the high safety standards pursuant to the directive 2014/68/EU with the CE mark, the Federal Emission Control Act and the Industrial Safety Ordinance.

When applied in horticulture, the modern, time-saving and energy-efficient cover steaming process is prevailing at an increasing rate. On open land, semi- and fully automatic steamers are already being used successfully on large areas, especially in vegetable and forest nurseries. A technical development is the use of spiked covers for so-called sandwich steaming. In this case, steam is applied by means of 17 centimetre long spikes to a depth of around 25 centimetre. Initial experience resulted in energy saving of 50 per cent over conventional cover steaming.

Steaming also has a good effect on combating weeds, soil-borne diseases and pests as well as soil fatigue for strawberries.

For this purpose, MSD has developed a dam steaming device which steams dams laid with mulch film and, at the same time, pierces the planting holes.

Sansevieria laurentii

Sansevieria is commonly known as snake plant or mother-in-law's tongue.

As houseplants, *Sansevieria* thrive on warmth and bright light, but will also tolerate shade. They can rot from over-watering, so it is important that they are potted in well-drained soil, and not over-watered. They need to be re-potted or split at the root from time to time because they will sometimes grow so large that they break the pot they are growing in.

It is one of the best plants for clean indoor air. Easy to care for.

Double flowered Hydrangea macrophylla varieties Felina ?, Florentina?, Feather? and Flame?

A clear focus of Hydrangea Breeders Association BV (HBA) currently lies in the breeding of double flowered hydrangeas. In addition there is also a focus on the plant production for the grower and a lasting joy to the end user. Some breeding goals here are the naturally compact growth, the total plant structure, stability of the shoots and the keeping quality at the consumer.

This year, the HBA presents four new macrophylla varieties, two mophead hydrangeas: **Felina?**, **Florentina?** and two lacecap hydrangeas: **Flame?** and **Feather?**. These differ in the individual flower size and the color gradient in the maturation process. The novelties combine very well in production characteristics with the other HBA varieties.

Features:

Felina? 'H217901'

Double flowered mophead Hydrangea, compact growth, strong shoots, very good branching, well suited for 9.5 to 17 centimetre pots, color: light pink / light blue

Florentina? 'H217902'

Double flowered mophead hydrangea with large sepals, middle growth, strong shoots, very good branching, good for small and larger pots, color: light pink / light blue

Flame? 'H217903'

Double flowered Lacecap hydrangea with large sepals, strong growth, strong shoots, very good branching, good for larger pots, does not moult, color: pink / blue

Feather? 'H217904'

Double flowered Lacecap hydrangea, strong growth, strong shoots, very good branching, also suitable for small pots, does not moult, color: pink / blue
