# Our production

[birikimsusbitkileri.com](http://birikimsusbitkileri.com)

Leading shrub company

## Our production method:

We reproduce our plants by means of vegetative propagation using our plants' parts such as buds, stems, roots or leaves.

## In our production:

No change in the makeup or appearance of the new plants, In many varieties of the plants we originate from a single plant, Our products have all the characteristics of the parent plant.

# Our production phases

[birikimsusbitkileri.com](http://birikimsusbitkileri.com)

Leading shrub company

## Phase I

We obtain the vegetative propagation materials from our plants which vary from season and plant.

# Our production phases

[birikimsusbitkileri.com](http://birikimsusbitkileri.com)

Leading shrub company

## Phase II

Prior to violing phase we dip the vegetative cuttings into the rooting hormones. To avoid possible contamination of the hormone container we place an amount of the powder on a clean paper .

## Phase III

We keep the vegetative propagation cuttings at certain atmospheric conditions in the rooting green-houses which are equipped with the state-of-art sub-heating systems.

## Phase IV

Our young plants taken into 8x8 cm pots or containers following the rooting period .We transplant the young plants into various sizes of containers ranging from 1.4 clt to 170 clt.In addition we are capable of growing project based custom products .
