DLVge, growing ideas

From heating to cooling and from design to delivery; DLVge has years of experience and expertise and is the leading technical consultancy firm in the greenhouse horticulture sector. We use advice and support to arrange everything for you in a practical and innovative manner, whether it involves complex construction projects, difficult application processes or challenging energy calculations. We make everything crystal clear and help your company to grow and flourish on the global stage.

Your project managed from A to Z, or a part of it

01 Design & energy

Focus on major contours and the finest details. This allows us to achieve the best possible results using innovative and cost-efficient solutions in the field of energy, water and the environment.

02 Permits

We use our extensive knowledge to effectively arrange permit applications and supervise procedures for our customers. And this helps to save you a lot of time and effort! Because regulations and law are different in every country, we work in close cooperation with local architects outside the Netherlands.

03 Specifications

Clear specifications make it easy for you to compare several quotes. We compile these specifications so all constructions and installations are perfectly in synch with each other.

04 Invitations to tender

The best price/quality ratio; that's what you can count on when we assist you in negotiations for installations and construction projects.

05 Implementation & consultation

We supervise and realise construction projects for the greenhouse horticulture sector all across the globe. This means you will get what you've paid for in accordance with planning and budget.

Construction

Investment in the future requires investment in your business, whether it involves construction, renovation or new installations. What is the best choice; are there payback possibilities and is it a responsible choice for the future? We are able to answer all these questions thanks to many years of experience and expertise in greenhouse horticulture.

Energy

Smart energy management helps to control the energy costs of your horticultural business and makes sure installations run efficiently. We use a tailor-made approach to coordinate your energy needs and energy generation, thus creating the best possible energy mix between heating, cold, light, CO₂ and sustainability.

- ◆ Efficient energy strategy
- ◆ Investments, annual costs and subsidies
- ◆ Energy savings and optimisation
- ◆ Robust and easy to configure
- ◆ Focus on sustainability

- ◆ Greenhouse construction, from consultation to realisation
- ◆ Screening installations
- ◆ Heating and cooling, for creating a suitable climate
- ◆ Water installations
- ◆ Electrical installations
- ◆ Assimilation lighting
- ◆ Cultivation facilities

“Crystal clear advice, effective realisation and practical support; DLVge is the leading consultancy firm in greenhouse horticulture.”

Permits & the environment

Do I need a permit and what is the best way to obtain one? We possess the required knowledge and take care of everything within the Netherlands region; when constructing, renovating or operating your greenhouse, but also when changing energy source, water storage or water use. We offer clear advice and practical support.

Because regulations and law are very specific for every country worldwide and sometimes even differ per local region, we only work in close cooperation with local architects outside the Netherlands.
