

# dutch plantin

*innovators in growth,  
investors in life*

## **THIS IS DUTCH PLANTIN**

Our goal? To make a positive difference. It therefore comes as no surprise that growers all over the world have become convinced of the added value of our coco substrate.

After all, it's the most sustainable growing medium for vegetables, soft fruit, flowers and plants. But there's more!

By investing in the countries that produce coconuts, we help local communities build a better future.

# GROWBAGS

## SLABS AND OPENTOPBAGS

Flowers, soft fruit - particularly strawberries - and virtually all vegetables grow really well on our coco growbags and pots. Once planted, you can count on a fast initial growth and a beautiful horizontal rooting. The growbags are made of coco chips and sieved coco pith. We will gladly advise you on the ideal mixture for your crops and can create it for you. And did you know we can transport up to 40,000 growbags in a single container? The key is to press them as efficiently as possible and create custom pallets. That is not only efficient and more affordable, but also good for our planet.

*Stable coco coir, the perfect substrate, the perfect additive*

# BLOCKS

## FOR CONTAINERS, TRAYS AND POTS

Whether you cultivate vegetables, flowers, soft fruit or potted plants, our coco blocks and briquettes are suitable for use in containers, trays and pots. The substrates are made of 100% pure coco, fiber or coco chips, and can be customised to meet your requirements. The blocks and briquettes are easy to use. All you need to do is wet the blocks and fill your containers with the loose coco. The blocks can be loosened either manually or using machinery.

**MORE INFORMATION AND ADVICE**  
Keen to find out which product best suits your crops? Contact us and we will gladly advise you.

### SOFT FRUIT

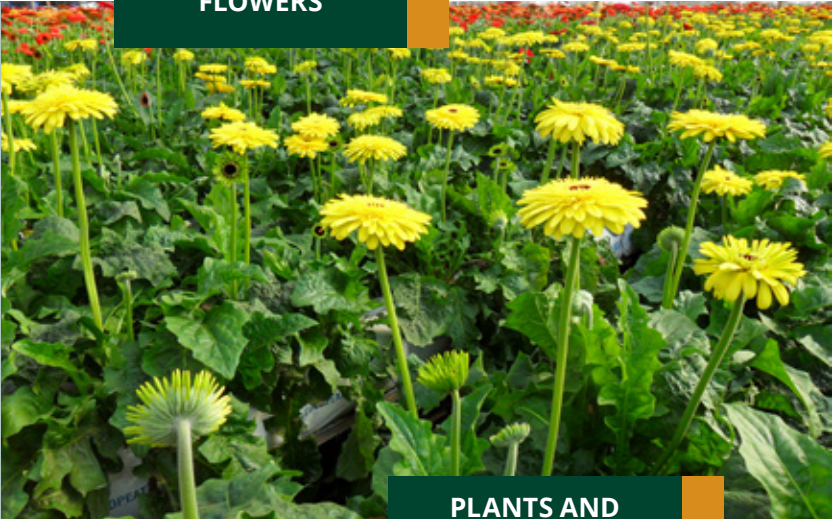

### VEGETABLES

### OUR GROWBAGS AND COCO BLOCKS:

- are very stable and 100% organic
- have low sodium and chloride levels
- have excellent moisture-retaining properties
- maintain a high air percentage throughout the entire cultivation period
- are stable, so they can be used for many years, even for different crops
- give solution to bad soil quality and soil diseases
- need much less fertilizer than soil
- allow you to save considerable amounts of fresh water
- are to reuse in other crops or as soil improvement

### FLOWERS

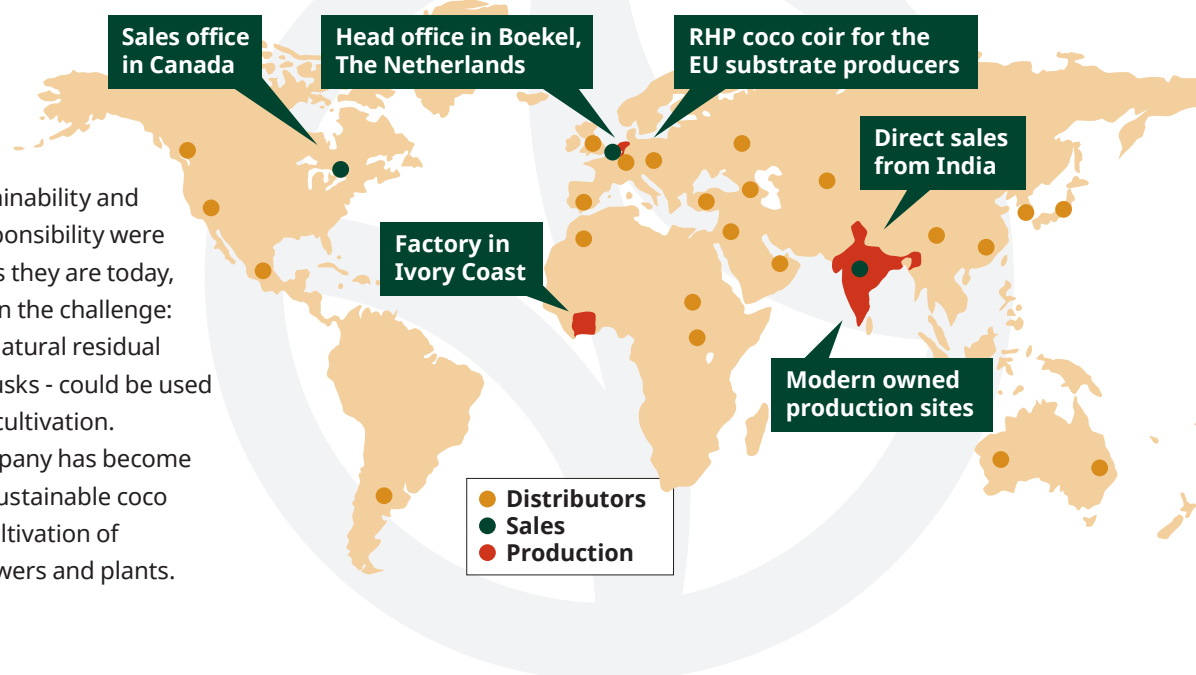

### PLANTS AND TREES

## THINKING BEYOND BOUNDARIES

At a time when sustainability and social corporate responsibility were not as widespread as they are today, Dutch Plantin took on the challenge: we analysed how a natural residual product - coconut husks - could be used as a raw material in cultivation. Meanwhile, our company has become a global pioneer in sustainable coco substrates for the cultivation of vegetables, fruit, flowers and plants.

## PRODUCTION

We are not afraid to distinguish ourselves by only processing 'aged' coco in our growbags, blocks and briquettes. It may be more labour-intensive and time-consuming, but we consciously chose to adopt this production method. Why, you ask? Simply because it enables us to provide our customers with a guaranteed stable product for excellent crop growth, even long-term.

## CREATING A POSITIVE IMPACT

Dutch Plantin has been making the world a better place for over 25 years. How, you ask? By convincing growers worldwide of the added value of coco as a raw material for the cultivation of vegetables, soft fruit, flowers and plants. No other growing medium is more sustainable. But there's more! Investing in the production countries allows us to improve the lives of many people.

## CONTACT US

Keen to find out more about the unique properties of our coco substrates? Or about the benefits of our products for your crops and the environment? Contact us today! Phone +91 422 256 2501 (India) or +31 492 747 560 (The Netherlands) or send us a message through our contact form on our website. We will get back to you as soon as possible.
