Quality from Stepping Stones

We hear consistently that our New Zealand field grown stock out-performs stock from other growers. We believe this due to the following factors:

- ◆ All of our stock is grown in field open ground conditions
- ◆ We do not use artificial media, light or heat. We do not irrigate, moisture is provided by generous year round rainfall
- ◆ We are located in an area with outstanding, free draining, highly fertile volcanic loam soil
- ◆ This combination of high soil quality and rainfall means that nutrition is readily available
- ◆ We experience seasonal periods of moderate to strong winds which enhance wood density and stem calliper
- ◆ Our average daytime temperatures range between 22°C in summer and 7°C in winter giving us distinct seasonal variation with the main spring flush in September and typically a second smaller growth flush in December-January
- ◆ Our trees are grown in full sunlight under New Zealand's naturally high UV light levels due to our clear sky and maritime environment. We experience high annual daily sunlight hours ranging between an average of 7.9 hours in summer and 3.9 hours in winter
- ◆ Our maples are grown on our own selected understock produced here on the nursery
- ◆ We work hard to make sure our trees are conditioned for a strong spring growth flush and are fully winter dormant before we despatch them
- ◆ Once packaged ready for export our trees are held in chilled, temperature controlled conditions throughout their journey
- ◆ Our proven logistics network ensures that our stock is freighted quickly and efficiently

The following procedures apply when importing trees from New Zealand into the USA:

1. If you are purchasing Japanese Maples you will be required to obtain a USDA “Agreement for post entry quarantine”. PPQ 546 (commonly referred to as a Post Entry Quarantine Permit).

Point to note:

Application for this permit requires a growing site inspection by the SPRO (State Plant Regulatory Official)

2. For purchase of our other genus you will require a USDA “Permit to import plants or plant products” PPQ587
3. We will need copies of the required USDA permits before we process and ship your trees. As they typically take some weeks to obtain we recommend that you apply as soon as you decide to order from us.
4. You will need to complete a Customs Power of Attorney so that the receiving Freight Forwarder can act on your behalf and facilitate Customs clearance and USDA inspection of the trees when they arrive.
5. Our Sales Agents can provide information to assist you with these procedures or contact us directly.

The following procedure applies when importing into Canada

1. You must obtain a “Permit to Import” from CFIA
2. We will need a copy of the permit before we process and ship your trees. As they typically take some weeks to obtain we recommend that you apply as soon as you decide to order from us.
3. You will need to complete a Customs Power of Attorney so that the receiving Freight Forwarder can act on your behalf and facilitate Customs clearance and inspection of the trees when they arrive.
4. Our Sales Agents can provide information to assist you with these procedures or contact us directly.

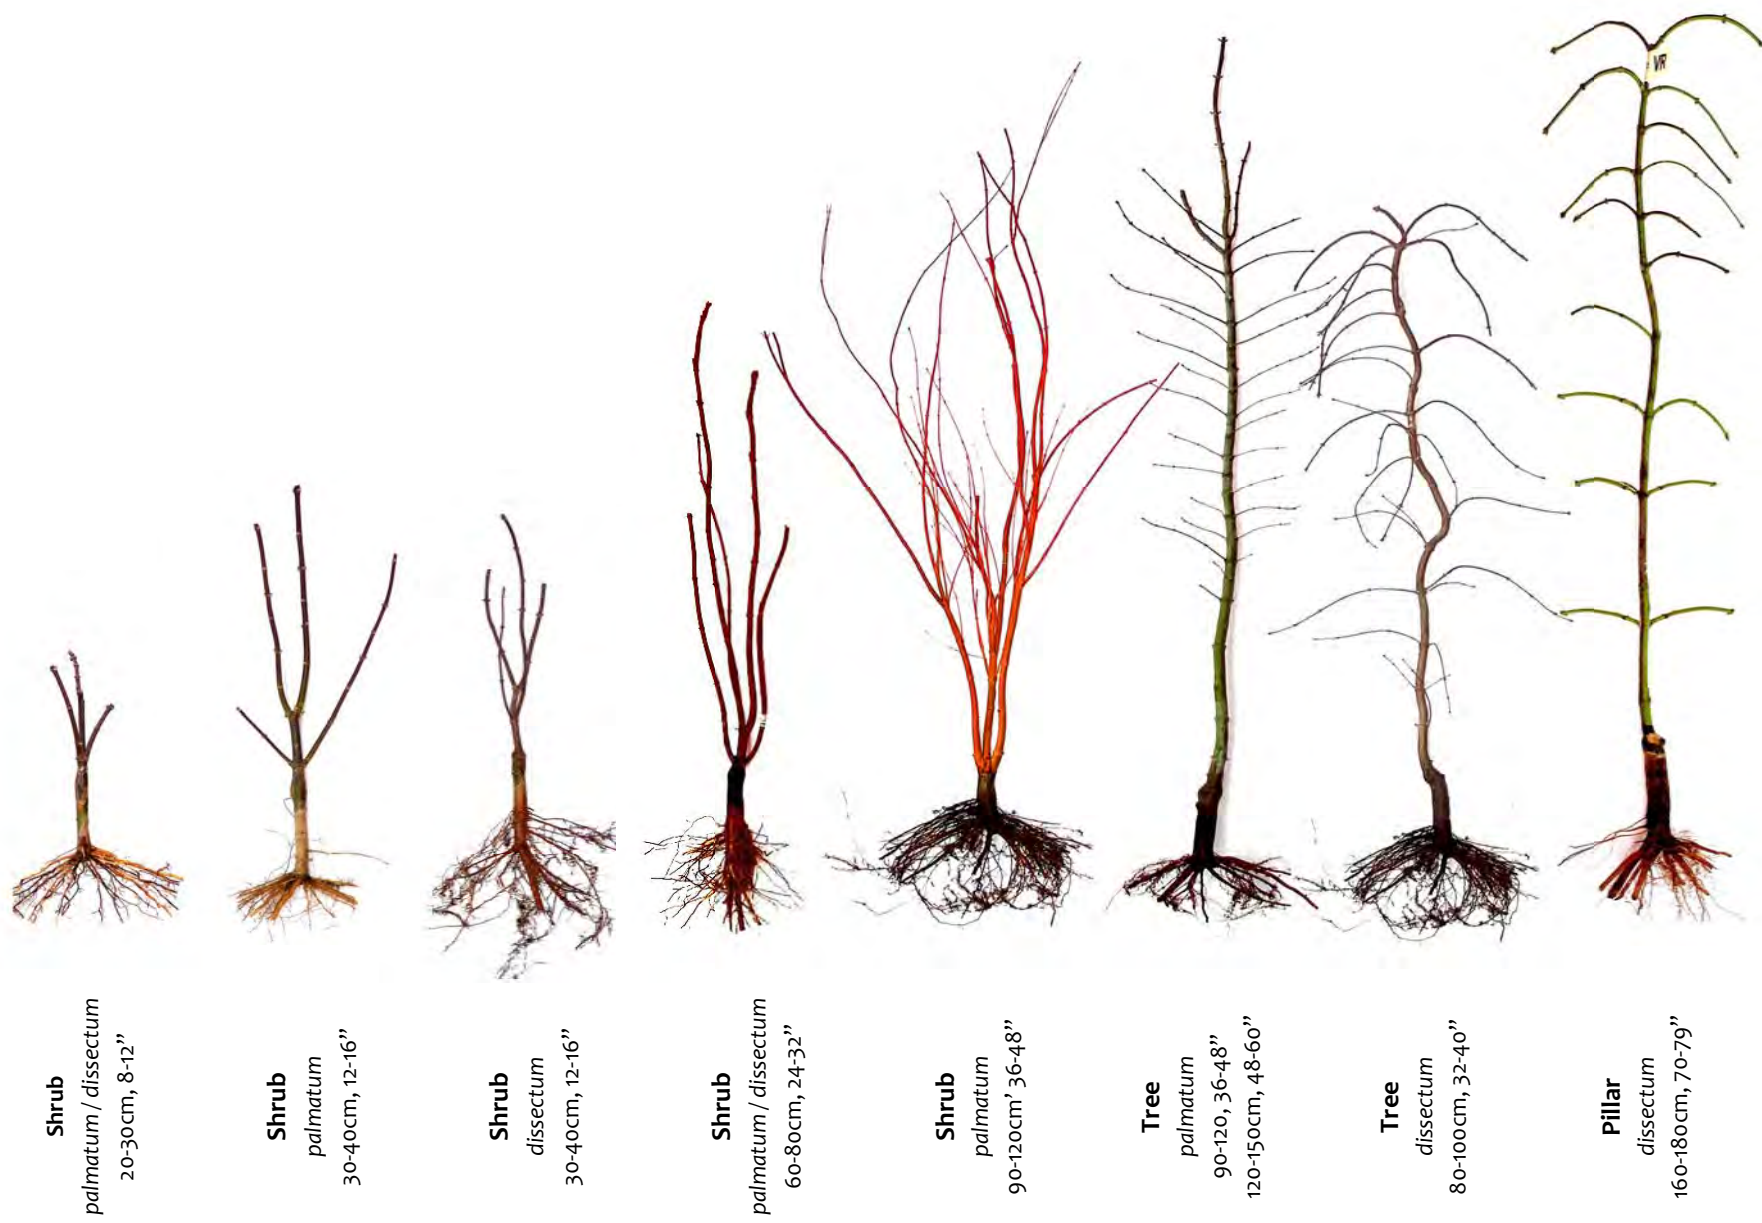

Permits are not required for importing into Europe and the United Kingdom.
